An Open Dimension of Meaning: A Semantic Study of Adjectives and Their Combinations-Jesús Gerardo Martín del Castillo 1997-01-01 Adjectives are lexematic words, functioning at the three levels of linguistic competence. They form a category; they belong to particular languages; and they are elements of free use by speakers. As virtual they belong to the system of the language; as instruments of expression they belong to the norm of the language; and as instruments of communication they belong to discourse. At the same time adjectives are predicates, the expression of a state of affairs provided with the instruments of relation and combination in a sentence or in a phrase. This study analyses the potentialities of expression and interpretation of adjectives.

The Meaning Of Social Policy-Bernice Q. Madison 2019-07-16 The purpose of this book is to survey the literature on social welfare policies and planning of different nations in order to explain some of the major problems that are encountered in comparative research and to highlight what has been learned so far.

The Geometry of Meaning-Peter Gärdenfors 2016-12-18 A novel cognitive theory of semantics that proposes that the meanings of words can be described in terms of geometric structures. In The Geometry of Meaning, Peter Gärdenfors proposes a theory of semantics that bridges cognitive science and linguistics and shows how theories of cognitive processes, in particular concept formation, can be exploited in a general semantic model. He argues that our minds organize the information involved in communicative acts in a format that can be modeled in geometric or topological terms—in what he terms conceptual spaces, extending the theory he presented in an earlier book by that name. Many semantic theories consider the meanings of words as relatively stable and independent of the communicative context. Gärdenfors focuses instead on how various forms of communication establish a system of meanings that becomes shared between interlocutors. He argues that these “meetings of mind” depend on the underlying geometric structures, and that these structures facilitate language learning. Turning to lexical semantics, Gärdenfors argues that a unified theory of word meaning can be developed by using conceptual spaces. He shows that the meaning of different word classes can be given a cognitive grounding, and offers semantic analyses of nouns, adjectives, verbs, and prepositions. He also presents models of how the meanings of words are composed to form new meanings and of the basic semantic role of sentences. Finally, he considers the future implications of his theory for robot semantics and the Semantic Web.

Dimensions of Meaning of Therapeutic Relationships in Occupational Therapy-Susan Ayres Rosa 1994

Modern Dimension Theory-Jun-Iti Nagata 2014-05-12 Bibliotheca Mathematica, Volume 6: Modern Dimension Theory provides a brief account of dimension theory as it has been developed since 1941, including the principal results of the classical theory for separable metric spaces. This book discusses the decomposition theorem, Baire’s zero-dimensional spaces, dimension of separable metric spaces, and characterization of dimension by a sequence of coverings. The imbedding of countable-dimensional spaces, sum theorem for strong inductive dimension, and cohomology group of a topological space are also elaborated. This text likewise covers the uniformly zero-dimensional mappings, theorems in euclidean space, transfinite inductive dimension, and dimension of non-metrizable spaces. This volume is recommended to students and specialists researching on dimension theory.

Lee Ufan-Hirshhorn Museum 2020 The beautiful companion volume to Lee Ufan’s largest site-specific outdoor sculpture project in the U.S. In fall 2019, the Hirshhorn Museum and Sculpture Garden debuts 10 new specially commissioned outdoor sculptures from celebrated Korean artist Lee Ufan. This book accompanies the expansive installation, which features sculptures from the artist’s signature and continuing “Relatum” series and marks the first exhibition of Lee’s work in the nation’s capital. For the first time in the Hirshhorn Museum’s 44-year history, its 4.3-acre outdoor plaza will be devoted entirely to the work of a single artist, and this book is a beautiful commemoration or keepsake of that event. Lee is a founder of the late 1960s artistic movement Mono-ha, or “School of Things,” so his artwork represents an encounter between the viewer, the materials, and the site. The sculptures in this installation and book reflect this: all of the sculptures respond to the museum’s unique architecture and continue Lee’s iconic practice of placing contrasting materials, such as stainless steel plates and boulders, in dialogue with one another to heighten awareness of the world. The book features more than 100 color illustrations, including preliminary sketches, photographs of the artist selecting materials for the work, images of the installation process, shots of installed sculptures, details of installed sculptures, and more.
these powerful images are a foreword, essays, artist interview, and short captions that highlight how the works are rooted in contemplation and sensation rather than static representation. Lee Ufan: Open Dimension offers readers an intimate look at the work, artistic process, and impact of one of the pioneering figures of postwar art.

Beyond Expressives: Explorations in Use-Conditional Meaning-Daniel Gutzmann 2013-07-18 Beyond Expressives: Explorations in Use-Conditional Meaning offers empirical and theoretical studies of expressions whose meaning falls outside the standard realm of truth-conditional semantics. Going beyond examples of expressives, the contributions account for the semantics and pragmatics various of use-conditional phenomena.

Environmental Aesthetics-Jack L. Nasar 1992-07-31 How do people react to the visual character of their surroundings? What can planners do to improve the aesthetic quality of these surroundings? Too often in environmental design, visual quality–aesthetics–is misunderstood as only a minor concern, dependent on volatile taste and thus undefinable. Yet a substantial body of research indicates the importance of visual quality in the environment to the public and has uncovered systematic patterns of human response to visual attributes of the built environment. Efforts to understand environmental aesthetics have been undertaken by investigators from such diverse fields as landscape architecture, environmental psychology, geography, philosophy, architecture, and city planning. As a result the relevant information is scattered and not readily available to professionals and policy makers. The book brings together classic and new contributions by distinguished workers in different disciplines. It explores theory and data on preferences in the visual environment, and also addresses the practical application of aesthetic criteria in design, planning and public policy. Promising directions for future research are identified.

Knowing Democracy – A Pragmatist Account of the Epistemic Dimension in Democratic Politics-Michael I. Räber 2020-10-06 How can we justify democracy's trust in the political judgments of ordinary people? In Knowing Democracy, Michael Räber situates this question between two dominant alternative paradigms of thinking about the reflective qualities of democratic life: on the one hand, recent epistemic theories of democracy, which are based on the assumption that political participation promotes truth, and, on the other hand, theories of political judgment that are indebted to Hannah Arendt's aesthetic conception of political judgment. By foregrounding the concept of political judgment in democracies, the book shows that a democratic theory of political judgments based on John Dewey's pragmatism can navigate the shortcomings of both these paradigms. While epistemic theories are overly and narrowly rationalistic and Arendtian theories are overly aesthetic, the neo-Deweyan conception of political judgment proposed in this book suggests a third path that combines the rationalist and the aesthetic elements of political conduct in a way that goes beyond a merely epistemic or a merely aesthetic conception of political judgment in democracy. The justification for democracy's trust in ordinary people's political judgments, Räber argues, resides in an egalitarian conception of democratic inquiry that blends the epistemic and the aesthetic aspects of the making of political judgments. By offering a rigorous scholarly analysis of the epistemic and aesthetic foundations of democracy from a pragmatist perspective, Knowing Democracy contributes to the current debates in political epistemology and aesthetics and politics, both of which ask about the appropriate reflective and experiential circumstances of democratic politics. The book brings together for the first time debates on epistemic democracy, aesthetic judgment and those on pragmatist social epistemology, and establishes an original pragmatist conception of epistemic democracy.

Son Goku battles the demon king! In Dragon Ball Culture Volume 5 we'll reunite with Goku and his friends as they compete in the 22nd Tenkaichi Budokai. Then we'll join them as they fight in a life or death battle against the Demon King Pikkoro! Akira Toriyama starts us off by introducing three new characters into the story. These are Tenshinhan, Chaozu, and their evil master, Tsuru-sennin. This book reveals each of their cultural backgrounds. That’s right, if you’ve ever said to yourself, “Why does Tenshinhan have a third eye?” and, “What the heck is Chaozu?!” then this is the book you've been waiting for. Toriyama then takes the Dragon Ball story to new depths by adding demons and gods into the mix. He increases the intensity of the series and makes it so Goku has no choice but to train harder in order to enact his revenge. And the way Goku does it is straight out of secret Daoist meditation practices of ancient China. Inside these pages you’ll discover the true origin of the demon king, find out how Goku learns to sense the energy of his opponents, and understand the full power of the world famous senzu. This book contains hundreds of new revelations about your favorite characters and their adventures through the Dragon World. Volume 5 explores Chapters 113 to 161. It’s time to face your demons!

European Dimension of Metropolitan Policies-Carola Fricke 2019-03-23 This book questions how policies for the metropolis become Europeanised. The book analyses how spatial concepts and political ideas permeate the European multi-level system. Through an interpretive comparison of five contexts, the book provides...
In French and German policies, metropolitan regions are increasingly framed as being central not only for inter-municipal coordination, but also as nodes within the European space. Moreover, Europeanised metropolitan regions such as Lyon and Stuttgart develop European strategies. The second development shows how metropolitan regions appear as actors and issues in the European policy arena, contributing to a tentative and implicit metropolitan dimension. This multi-scalar analysis is of interest for scholars and practitioners specialised in metropolitan regions, European urban and regional policies, geography and related areas. Reclaiming the Tacit Dimension—George Kalamaras 1994-03-31 This book examines Eastern philosophies of meditative silence in the context of Western rhetoric and discourse theory, arguing that silence is an authentic dimension of knowing. Rather than an emptiness that is nihilistic, the void of meditative silence is, according to the author, a fullness in which meaning occurs. Kalamaras calls for a rethinking of the implications of such a concept of silence on contemporary theories of composition and the teaching of writing.

Two-dimensional Semantics—Tatjana Scheffler 2013-01-30 This book argues that in order to account for the compositional behavior of many near-synonymous items, semantic analyses need to pay close attention to at least two semantic dimensions: standard assertions and conventional implicatures, which express additional side comments. The discussed phenomena are clausal adjuncts and complements in German. The new analysis of ‘weil’ and ‘denn’ (‘because’) shows that both contribute the same semantic operator, but one as an assertion, the other as a conventional implicature. This explains why only ‘denn’ can have speech-act modifying uses. This novel two-dimensional analysis is extended to other sentence adjuncts such as regular vs. relevance conditionals, although-clauses, and sentence adverbs. Further, the book investigates certain complement clauses. It analyzes sliftings as evidential-like parentheticals which contribute their meaning on the conventional implicature dimension. In contrast, German embedded verb-second clauses are shown to be truly embedded and analyzed as operating in the assertion dimension. The verb-second syntax is shown to contribute an additional epistemic component on the conventional implicature dimension.

The Aesthetic Dimension of the Mind—Lia Pistiner de Cortinas 2018-03-28 'In this magisterial work, the author almost encyclopaedically reviews all of Bion's works and does so from the perspective (vertex) of the aesthetic dimension. She scans virtually all the essential elements of Bion's contributions and then details them at length, giving unusual clarifications as she does so.' This work constitutes an outstanding piece of Bion scholarship and interpretation. One comes away from it with a deep appreciation for the authors dreaming of Bion's work and for the light she has shined on many of Bion's more recondite themes.’- James Grotstein MD, Professor of Psychiatry, UCLA School of Medicine, from his Preface

The Spiritual Dimension of Ageing—Elizabeth MacKinlay 2001 "Drawing on in-depth interviews with older people, Elizabeth MacKinlay, develops an understanding of spirituality that enables the reader to explore the spiritual dimension of ageing and to learn how it contributes to well being and health in later life. This book will be a useful text for students, trainers and academics, policy makers and practitioners in health and social care, as well as religious professionals, in hospital, residential and other caring settings."—BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. Opening the Heart of the Cosmos—Thich Nhat Hanh 2003-10-28 Zen Master Thich Nhat Hanh uses the Lotus Sutra, one of Mahayana Buddhism’s most revered texts, to illustrate the Buddha nature inherent in everyone. With great passion and clarity, he demonstrates how each human being has the capacity to transform their own individual suffering, develop compassion, and help create more peace in the world. Nhat Hanh’s insights invoke a wide range of contemporary topics and concerns, from war and the threat of terrorism to individual anxiety and the degradation of our environment. He proposes a radical new solution to current conflicts, encouraging each of us to work on our own mindfulness practice to create greater peace and harmony. His accessible analysis of the sacred text demonstrates its practical and direct applicability to today’s concerns.

Spiritual Dimensions of Bediuazzaman Said Nursi’s Risale-I Nur—Ibrahim M. Abu-Rabi’ Essays on various facets of Nursi’s spirituality as portrayed in his Risale-i Nur. Innovation—the Missing Dimension—Richard K. Lester 2006-04-15 Amid mounting concern over the loss of jobs to low-wage economies, one fact is clear: America’s prosperity hinges on the ability of its businesses to continually introduce new products and services. But what makes for a creative economy? How can the remarkable surge of innovation that fueled the boom of the 1990s be sustained? For an answer, Richard K. Lester and Michael J. Piore examine innovation strategies in some of the economy's most dynamic sectors. Through eye-opening case studies of new product development in fields such as cell phones, medical devices, and blue jeans, two fundamental processes emerge. One of these processes, analysis—rational problem solving—dominates management and engineering...
An Open Dimension Of Meaning A Semantic Study Of Adjectives And Their Combinations

practice. The other, interpretation, is not widely understood, or even recognized—although, as the authors make clear, it is absolutely crucial to innovation. Unlike problem solving, interpretation embraces and exploits ambiguity, the wellspring of creativity in the economy. By emphasizing interpretation, and showing how these two radically different processes can be combined, Lester and Piore's book gives managers and designers the concepts and tools to keep new products flowing. But the authors also offer an unsettling critique of national policy. By ignoring the role of interpretation, economic policymakers are drawing the wrong lessons from the 1990s boom. The current emphasis on expanding the reach of market competition will help the analytical processes needed to implement innovation. But if unchecked it risks choking off the economy's vital interpretive spaces. Unless a more balanced policy approach is adopted, warn Lester and Piore, America's capacity to innovate—its greatest economic asset—will erode.

Paul Ricoeur and the Poetic Imperative-W. David Hall 2012-02-01 Looks at Ricoeur’s writings on love and justice, prominent toward the end of his life, and how these serve as an interpretive key to his thought as a whole.

Incardination and the Universal Dimension of the Priestly Ministry-Michael J. Mullaney 2002 This thesis takes the mutual relationship that exists between the particular and universal church as outlined in the second Vatican Council and examines how it is reflected in the ministry of the bishop and the priest whose ministries belong to the essence of the church...Recent magisterial reflections which unfold the theological pastoral and spiritual dimensions of the juridical practice of incardination are explored.

Quantum Creation: Does the Supernatural Lurk in the Fourth Dimension?-Josh Peck 2014-08-03 Quantum physics from a biblical perspective: Is there a way for science and religion to complement one another? Does quantum physics have any place in the Bible? Do biblical interpretations have any use in explaining scientific observations? Is quantum physics unknowable to religious minds? Must a scientific mind also be void of religion? Is there an unseen world that exists all around us? Do things like strings, branes, multiple dimensions, parallel universes, time warps, quantum entanglement, and extradimensional beings have any place in biblical descriptions of God’s creation? These questions and more are addressed in Quantum Creation. For the first time ever, the study of quantum physics is made available to the religious mind while explaining theological implications. Even better yet, the information is presented in a way anybody can understand. Learn just how perfectly compatible science and religion can be and why it seems they are always at odds.

The Translatability of the Religious Dimension in Shakespeare from Page to Stage, from West to East-Jenny Wong 2018-05-29 This interdisciplinary study traverses the disciplines of translation studies, hermeneutics, theater studies, and sociology. Under the "power turn" or "political turn" in translation studies, the omission and untranslatability of religious material are often seen as the product of censorship or self-censorship. But the theology of each individual translating agent is often neglected as a contributing factor to such untranslatability. This book comprehensively traces the hermeneutical process of the translators as readers, and the situational process and semiotics of theater translation. Together these factors contribute to an image of translated literature that in turn influences the literature's reception. While translation theorists influenced by the current "sociological turn" view social factors as determining translation activities and strategies, this volume argues that the translator's or the dramatist's theology and religious values interact with the socio-cultural milieu to carve out a unique drama production. Often it is the religious values of the translating agents that determine the product, rather than social factors. Further, the translatability of religious discourse should be understood in a broader sense according to the seven dimensions proposed by Ninian Smart, rather than merely focusing on untranslatability as a result of semantic and linguistic differences.

User Generated Branding-Ulrike Arnhold 2010-11-22 From a brand management perspective Ulrike Arnhold analyses the impact of interactive marketing programmes in Web 2.0, evaluating user generated content as a tool of the brand communication mix.

The Path to the 5th Dimension-Britt Bartenbach 2020-08-09 The Path to the 5th Dimension provides the reader with a wealth of inspiration on how to cope with the challenges of life in our complicated world of duality. It shows how each of us has the power to change our world for the better; not only for ourselves - but for Humanity at large and our Planet. Humanity and Earth are going through a time of transition as we are leaving the end times of the Age of Pisces. Our entry into the Golden Age of Aquarius holds great promise for the fulfilment of ascension into a fifth-dimensional reality of higher consciousness. The Path to the 5th Dimension contains valuable pearls of wisdom from esoteric and hermetic teachings suggesting ways of applying our mental capacities to attain inner peace of mind and true freedom. The book is a constructive aid to those aspiring to master the Art of Living.

an-open-dimension-of-meaning-a-semantic-study-of-adjectives-and-their-combinations
The Hidden Dimension-Edmund T. Hall 1966 An examination of various cultural concepts of space and how differences among them affect modern society. Introducing the science of "proxemics," Hall demonstrates how man's use of space can affect personal business relations, cross-cultural exchanges, architecture, city planning, and urban renewal.

Dynamics in One Dimension-Louis S. Block 2006-11-14 The behaviour under iteration of unimodal maps of an interval, such as the logistic map, has recently attracted considerable attention. It is not so widely known that a substantial theory has by now been built up for arbitrary continuous maps of an interval. The purpose of the book is to give a clear account of this subject, with complete proofs of many strong, general properties. In a number of cases these have previously been difficult of access. The analogous theory for maps of a circle is also surveyed. Although most of the results were unknown thirty years ago, the book will be intelligible to anyone who has mastered a first course in real analysis. Thus the book will be of use not only to students and researchers, but will also provide mathematicians generally with an understanding of how simple systems can exhibit chaotic behaviour.

The Metalinguistic Dimension in Instructed Second Language Learning-Karen Roehr 2013-07-04 The metalinguistic dimension refers to the way in which learners bring to bear knowledge about language into their learning of a second language, the "L2". This book brings together new research on the metalinguistic dimension, given its increasing importance in the study of L2 acquisition. In applied linguistics it is widely accepted that L2 learners develop and use knowledge about language when engaging with the challenging task of acquiring a new language; this applies to both children and adults. It is definitions of the metalinguistic dimension that vary, and findings regarding its role in L2 learning are not necessarily homogenous or compatible. The scope exists for further, empirical, detailed research. This book explores the nature, development and role of the metalinguistic dimension and will be essential reading for all SLA scholars and those working in language and education.

Methodological Dimension Of Islamic Economics-Masudul Alam Choudhury 2019-01-07 The theme of circular causation has nascent origin in the field of sociology of economics with vast development applications and with epistemological issues on modeling in the framework of the phenomenon of pervasive interconnectedness. Thus the sociological theme of epistemic unity of knowledge grounds the theory and application of the theory and models of circular causation to the vast realm of socioeconomic development issues. The theory and application of circular causation has methodological similarities with Gunnar Myrdal's theory of social causation and Joseph Schumpeter's and Hayek's learning models of evolutionary phenomena. One can re-engineer many important works by sociological economists in and by the methodology of circular causation. Among these other important works are capabilities and functioning by Amartya Sen; John Rawls' evolutionary good society aspiring for social justice; adaptation of Ilya Prigogine's theory of being and becoming to social, economic and development phenomenon; and George Soros' theory of reflexivity in history and financial markets. The proponent of this book has pioneered the area of theory and application of circular causation extensively.

Social Justice, Multicultural Counseling, and Practice-Heesoon Jun 2009-06-25 Until now, an important aspect of multicultural counseling has been long overlooked amid the profusion of literature—the practical application of multicultural theory. Social Justice, Multicultural Counseling, and Practice: Beyond a Conventional Approach fills this void and tackles some of the top challenges in multicultural counseling including how to implement multicultural theory and how to practice social justice and equity. This groundbreaking work takes a multilayered and multidimensional approach that will help practitioners "walk the talk" of multicultural competency. It introduces a new model that will give practitioners a clearer understanding of the client's worldview for culturally appropriate assessment, diagnoses, and treatment. Key Features Provides Concrete Strategies boxes for introduced concepts Emphasizes self-reflection and self-awareness for practitioners Contains exercises to help practitioners better understand ethnocentrism, types of thinking styles, and automatic thought patterns Examines the complexities of the intersection of multiple identities and sociocultural contexts Includes a unique organization style that groups topics by various "isms" (ageism, classism, racism, etc.) Intended Audience Based on holistic thinking and transformative learning styles, this core text is ideal for graduate courses in counseling, psychology, or social work.

Dimensions of the Hermeneutic Circle-Ronald Bontekoe 1996 Dimensions of the Hermeneutic Circle is intended to give readers who are philosophically sophisticated but not yet conversant with hermeneutics a comprehensive overview of the history and concerns of the discipline.

Dimension Theory-Michael G. Charalambous 2019-10-08 This book covers the fundamental results of the dimension theory of metrizable spaces, especially in the separable case. Its distinctive feature is the emphasis on the negative results for more general spaces, presenting a readable account of numerous counterexamples.
to well-known conjectures that have not been discussed in existing books. Moreover, it includes three new general methods for constructing spaces: Mrowka's psi-spaces, van Douwen's technique of assigning limit points to carefully selected sequences, and Fedorchuk's method of resolutions. Accessible to readers familiar with the standard facts of general topology, the book is written in a reader-friendly style suitable for self-study. It contains enough material for one or more graduate courses in dimension theory and/or general topology. More than half of the contents do not appear in existing books, making it also a good reference for libraries and researchers.

The Systemic Dimension of Globalization, Second Edition-Elizabeth MacKinlay 2017-02-21 What does it mean to grow old? What makes later life meaningful? What gives a frail and isolated or institutionalised older person their sense of wholeness and self? This substantially updated new edition of Elizabeth MacKinlay's seminal text presents the latest theory and research to explore these questions in depth, pointing the way towards new ways of thinking about and engaging with the spirituality of ageing. Encompassing the findings of a new research study on baby boomer spirituality, the book presents a wider and more comprehensive view of ageing and spirituality, concluding that spirituality for the baby boomer generation is every bit as important as for the cohorts before them, but also fundamentally different, with fewer being practicing members of a religious faith. Drawing on in-depth interviews with older people, and containing many new ideas whilst also addressing the foundational theories and questions essential to scholarship in this field, the book also includes a new and timely chapter on the spirituality of older people in our increasingly multicultural and multi-faith societies. This clear and practical text presents much-needed guidance for health and social care practitioners, chaplains, clergy and others seeking to identify and support the spiritual needs of older people, as well as students and researchers in related disciplines.

The Soul Dimension of Yoga-Heinz Grill 2005-01

Power, Trust, and Meaning-S. N. Eisenstadt 1995-06-15 S. N. Eisenstadt is well known for his wide-ranging investigations of modernization, social stratification, revolution, comparative civilization, and political development. This collection of twelve major theoretical essays spans more than forty years of research, to explore systematically the bases of human action and society. Framed by a new introduction and an extensive epilogue, which are themselves important statements about processes of institutional formations and cultural creativity, the essays trace the major developments of contemporary sociological theory and analysis. Examining themes of trust and solidarity among immigrants, youth groups, and generations, and in friendships, kinships, and patron-client relationships, Eisenstadt explores larger questions of social structure and agency, conflict and change, and the reconstitution of the social order. He looks also at political and religious systems, paying particular attention to great historical empires and the major civilizations. United by what they reveal about three major dimensions of social life—power, trust, and meaning—these essays offer a vision of culture as both a preserving and a transforming aspect of social life, thus providing a new perspective on the relations between culture and social structure.

Open Learning and Teaching in Educational Communities-Christoph Rensing 2014-08-13 This book constitutes the refereed proceedings of the 9th European Conference on Technology Enhanced Learning, EC-TEL 2014, held in Graz, Austria, in September 2014. The 27 full papers and 18 short papers presented were carefully reviewed and selected from 165 submissions. They address topics such as informal learning, self-regulated and self-directed learning, reflective learning, inquiry based learning, communities of learners and communities of practice, learning design, learning analytics, personalization and adaptation, social media, computer supported collaborative learning, massive open online courses, schools and universities of the future.

Fractal Geometry, Complex Dimensions and Zeta Functions-Michel L. Lapidus 2012-09-20 Number theory, spectral geometry, and fractal geometry are interlinked in this in-depth study of the vibrations of fractal strings, that is, one-dimensional drums with fractal boundary. Throughout Geometry, Complex Dimensions and Zeta Functions, Second Edition, new results are examined and a new definition of fractality as the presence of nonreal complex dimensions with positive real parts is presented. The new final chapter discusses several new topics and results obtained since the publication of the first edition.

The Systemic Dimension of Globalization-Piotr Pachura 2011-08-01 Today science is moving in the direction of synthesis of the achievements of various academic disciplines. The idea to prepare and present to the international academic milieu, a multidimensional approach to globalization phenomenon is an ambitious undertaking. The book The Systemic Dimension of Globalization consists of 14 chapters divided into three sections: Globalization and Complex Systems; Globalization and Social Systems; Globalization and Natural Systems. The Authors of respective chapters represent a great diversity of disciplines and methodological approaches as well as a variety of academic culture. This is the value of this book and this merit will be appreciated by a global community of

An Open Dimension Of Meaning A Semantic Study Of Adjectives And Their Combinations
Managing the Human Dimension of Disasters-Kjell Brataas 2021-03-31 Managing the Human Dimension of Disasters provides the most comprehensive and up-to-date analysis on how individuals cope with tragedy and loss. Kjell Brataas gives a voice to those who have suffered and have been affected by unimaginable trauma. Noted experts recount stories and share their knowledge of how they assisted victims following tragedies such as the Manchester Arena bombing, the 2004 Indian Ocean tsunami, terror attacks, several aircraft disasters and school shootings, the 9/11 attacks and the COVID-19 pandemic. The book focuses on those affected by a disaster, including the bereaved, survivors and first responders. Leaders of support groups formed after these tragedies, trauma therapists and psychologists from three continents offer their experiences dealing with victims and the aftermath of disaster. Chapters provide guidance on memorializing tragedies, site visits, donation management, media relations, social media, grief counseling and human resilience. Readers will be shown that psychological support is critical after a disaster and learn from those who deal with emergencies. Brataas’ unmatched volume offers new understandings, recommendations, best practices and benchmarks on how best to assist victims in the aftermath of disaster. A valuable resource for students, researchers and practitioners.

The Political Dimension of Constitutional Law-Miguel Nogueira de Brito 2020-03-21 This book discusses in what sense constitutional law has a political dimension, raising the question whether constitutional law is fundamentally political as to its validity, terms of its origin, conceptual structure and/or corresponding practice. It also poses the question whether that dimension is a political-theological dimension. A positive answer to these questions challenges the prevailing view that constitutional law is to be conceived strictly as law, moreover as written law, approved at a certain point in history by a particular power and interpreted as any other law by the judiciary. The essays included in this book, written by leading scholars in constitutional theory - including Martin Loughlin, Paul Kahn, Manon Altwegg-Boussac and Massimo La Torre - address these questions in a timely and original way.

The Cultural Dimension of Global Business (1-download)-Gary Ferraro 2015-07-22 Demonstrates how the theory and insights of cultural anthropology can positively influence the conduct of global business. The Cultural Dimension of Global Business provides a foundation for understanding the impact of culture on global business and global business on culture. Learning Goals Upon completing this book readers will be able to: Understand the interaction between global business and culture Discuss comparative values and cultural differences Recognize the importance of understanding nonverbal communication patterns prevalent in the international business arena Be familiar with three functional processes critical to success in conducting global business: negotiating, partnering, and managing Identify strategies for coping with culture shock
