PREVALENCE, RISK FACTORS AND OUTCOMES OF VENTILATOR ASSOCIATED PNEUMONIA IN CHILDREN ADMITTED IN PEDIATRIC INTENSIVE CARE UNIT IN BIKANER, NORTHWETERN INDIA-Gajanand Singh Tanwar 2017

Abstract

OBJECTIVES: The epidemiology and outcomes of ventilator associated pneumonia (VAP) are well described in adults. Although children have different anatomy and physiology, have different underlying illnesses, and undergo different surgical procedures from adults, few data exist for pediatric patients, particularly with respect to risk factors and outcomes. This prospective study was executed to determine the prevalence, the risk factors and outcomes associated with VAP in children admitted in pediatric intensive care unit (PICU) in PBM children hospital.

METHODS: This prospective cohort study enrolled all children (u226415 years aged) who were admitted to the PICU from January 2017 to December
2017, except those who died within 24 hours. The primary outcome measured was the development of VAP. Secondary outcomes were death and length of stay in PICU. Multiple logistic regression analysis was performed to determine independent predictors for VAP.

RESULTS: There were 124 episodes of VAP in 334 mechanically ventilated children. The mean VAP rate was 11.6/1000 ventilator days. Patients with VAP had been in the PICU for a mean of 8.9 days before the development of VAP. There was a preponderance of Gram-negative organisms, particularly P. aeruginosa and Klebsiella pneumoniae. By logistic regression analysis, genetic syndrome (odds ratio [OR]: 2.37; 95% confidence interval [CI]: 1.01-5.46), reintubation (OR: 2.71; 95% CI: 1.18-6.21), and transport out of the PICU (OR: 8.90; 95% CI: 3.82-20.74) independently predicted VAP.

Total parental nutrition, steroids, and histamine type 2 receptor blockers were common drugs that associated with VAP.

CONCLUSIONS: VAP occurs at significant rates among mechanically ventilated PICU children and is associated with processes of care. Additional studies are necessary to develop interventions to prevent VAP.
