Chapter 1 Review Guide - Introduction to Anatomy and Physiology

1. Describe the difference between ANATOMY and PHYSIOLOGY.
2. Know the levels of organization from simplest to most complex.

Match the terms on the left with the proper selection on the right.

1. Organism
   - A. Many similar cells that act together to perform a common function
2. Cells
3. Tissue
   - B. The most complex units that make up the body
4. Organ
   - C. A group of several different kinds of tissues arranged to perform a special function
5. Systems
   - D. Denotes a living thing
   - E. The smallest living units of structure and function in the body

4. Define homeostasis. Know the components of a negative feedback loop and be able to label them on a sample pathway.

5. Control center, Target organ, Receptor, Sensory pathway, Efferent Pathway

6. Describe how negative feedback and positive feedback act to regulate body function.

Ex: Calcium homeostasis: A rise in blood calcium levels causes a release of a hormone from the thyroid gland. This hormone then promotes Calcium deposition in the bone, removing it from the blood. Is this an example of negative or positive feedback? Could you draw a diagram of this feedback loop?

7. Describe the **body cavities**, what organs are found in each and be able to identify them on a diagram. (See handouts, diagram below, and flow chart notes)

8. Describe the 11 **organ systems** (MURDELS LIN), their functions, and organs found in each

9. Know the relative directional terms:
   - deep/superficial
   - superior/inferior
   - anterior/posterior
   - dorsal/ventral
   - lateral/medial
   - proximal/distal
   - cranial/caudal
   - prone/supine
