Atlas of Endoscopy with Narrow Band Imaging-Manabu Muto 2015-11-04 With its focus on narrow band imaging, this book is an excellent reference for new as well as experienced practitioners in the field of endoscopy. Narrow band imaging has brought about a revolutionary improvement in diagnostic endoscopy, enabling objective diagnosis and precise detection of lesions. It has enhanced the capability of endoscopy to facilitate qualitative diagnoses for the great benefit of patients who undergo endoscopic examinations. However, a standardized system of classification has not yet been established and many clinicians and researchers are not yet highly skilled in utilizing the technique or interpreting the images that are produced. This atlas addresses those issues, providing clear, simple and easy-to-
understand descriptions illustrated with generous use of endoscopic images.

Photographic Atlas of Practical Anatomy II-Walter Thiel 2013-12-01 Walter Thiel's brilliant photographs are unique. They revolutionize macroscopic anatomy because - due to a new preservation technique developed by the author himself - all tissues retain their living color, consistency and position. For the first time anatomical sites show the real color and form of human organs as well as their true positions. Thiel's new technique, his exceptional abilities as a photographer and the filigree dissections add up to vivid, almost artistic illustrations of great depth and clarity. Apart from the topographical anatomy of the upper part of the human body, Part II illustrates the most important punctures of joints and some surgical approaches. Thus this atlas is not only of interest to anatomists and pathologists but particularly to those working in surgical professions.

Atlas of Stem Anatomy in Herbs, Shrubs and Trees-Fritz Hans Schweingruber 2012-09-07 This work, published in two volumes, contains descriptions of the wood and bark anatomies of 3000 dicotyledonous plants of 120 families, highlighting the anatomical and phylogenetic diversity of dicotyledonous plants of the Northern Hemisphere. The first volume principally treats families of the Early Angiosperms, Eudicots, Core Eudicots and Rosids, while the second concentrates on the Asterids. Presented in Volume 2 are microsections of the xylem and phloem of herbs, shrubs and trees of 1000 species and ca. 35 families of various life forms of the temperate zone along altitudinal gradients from the lowland at the Mediterranean coast to the alpine zone in Western Europe. Special attention is given to the very diverse family of Asteraceae. The global perspective of the findings is underlined by the analysis of 400 species from the Caucasus, the Rocky Mountains and Andes, the subtropical zone on the Canary Islands, the arid zones in the Sahara, in Eurasia, Arabia and Southwest North America, New Zealand and the boreal and arctic zones in Eurasia and Canada. The presence of annual rings in all life forms demonstrates that herbs and dwarf shrubs are an excellent tool for the reconstruction of annual biomass production and the interannual dynamic of plant associations. The common principle of the anatomical expression of secondary growth is a key factor in understanding evolution and adaptation processes in all life forms, from the 3 cm tall crepide pigmea (Crepis pygmaea) in the alpine zone to the 40 m tall
exactly what they will see in the dissection lab. Chapters are organized by region in order of a typical dissection. Each chapter presents structures both in a systemic manner from deep to surface, and in a regional manner. This edition has sixteen additional pages of clinical images—including CT and MRI—that students can compare with cross-sectional anatomic photographs. Many pictures have been electronically enhanced or rescanned for better contrasts.
