Anatomy Of Heart Posterior View
transversal, horizontal and sagittal sections of eleven organisms widely used in university teaching. Six invertebrate and five vertebrate species – from the nematode worm (Ascaris suum) to mammals (Rattus norvegicus) – are shown in detailed images. Studying the macrosections with unaided eyes, with a simple magnifier or binocular microscope might be of great help to accomplish traditional anatomical studies and to establish a certain spatial experience/space perception. This volume will be of great interest for biology students, researchers and teachers of comparative anatomy. It might act as supporting material of practical courses. Furthermore, medical practitioners, agricultural specialists and researchers having an interest in comparative anatomy might also benefit from it.

Clinical Anatomy Flash Cards-Douglas J. Gould 2007-04-01 This clinically relevant anatomy flash card set is based on the concepts and full-color images in Moore and Dalley's Clinically Oriented Anatomy, Fifth Edition and Agur and Dalley's Grant's Atlas of Anatomy, Eleventh Edition. The card set is a convenient, flexible, portable, practical study and review tool for gross anatomy courses, USMLE Step 1 preparation, clinical anatomy review during clerkships, and for dental and allied health students. Organized and color-coded using the regional approach of Clinically Oriented Anatomy, the cards feature clinically relevant descriptions of structures, concise versions of the text's clinical "Blue Boxes", and correlating images. Realistic anatomic renderings from Grant's Atlas complement this clinically oriented material.
