Body Contouring-Melvin A. Shiffman 2010-09-14 As plastic surgeons, we seek to combine art and science to improve the results we see in clinical practice. Through our artistic sensibilities, we try to understand and obtain aesthetic results. Scientific analysis provides the data to predict which approaches will be successful and safe. Both art and science connote a high level of skill or mastery. At the present time, our literature is replete with descriptions of specific procedures for body contouring. However, there remains a need for a definitive reference describing the basic principles to address the complete scope of body contouring including the postbariatric patient and their plastic surgery deformities. Dr. Shiffman and Dr. Di Giuseppe saw this need and sought to address the needs of plastic surgeons faced with the complexities of body contouring surgery. This is a comprehensive text aimed at providing multiple perspectives. The numerous sections, which include asymmetry and lipolysis, the breast, abdomen, chest, and buttocks, the extremities, and liposuction, offer various approaches from the foremost authors. Indeed it is with a tremendous amount of skill and mastery that Dr. Shiffman and Dr. Di Giuseppe have successfully edited and collated the numerous contributions to this work. In addition, they have authored individually or, in collaboration, over a dozen of the 87 total chapters. Their combined work as editors and authors are evident throughout their text. The final result is a comprehensive contribution that will benefit all plastic surgeons seeking to improve their approach to body contouring.
