Born to Run Christopher McDougall 2010-12-09 At the heart of Born to Run lies a mysterious tribe of Mexican Indians, the Tarahumara, who live quietly in canyons and are reputed to be the fastest distance runners in the world. In 1991, one of them, aged 57, came first in a prestigious 105-mile race wearing a toga and sandals. A small group of the world's top ultra-runners (and the few-in-sport author) make the treacherous journey into the canyons to try to learn the tribe's secrets and then take them on over a course 50 miles long. With incredible energy and smart observation, McDougall tells this story while asking what the secrets are to being an incredible runner.

Travelling to labs at Harvard, Nike, and elsewhere, he comes across an incredible cast of characters, including the world's fastest man, for 300 miles and for her encore ran a 2:50 marathon in a bikini, passing to down a beer at the 20 mile mark.

The Boxer Rebellion and Its Aftermath 1919-1946 George Cushing Fraser 2005-01-01 Frederick H. Swanson has edited Fraser's voluminous journals into a single volume covering three trips taken from 1914 to 1916. Fraser covers impressions of the land that will fascinate any reader who wonders what the country was like before it became a popular tourist destination - and one that will inform historians interested in early accounts of the West. As a government party descended the Colorado River, its first impressions of the Grand Canyon were of a place where one could not drink without immediate death. The year 1920...

Grand Canyon's Unlikely Storyteller The Albert Le LoConte 2011-06-09 James "Jimmy" Owens, at the request of Teddy Roosevelt, moved to the remote North Rim of the Grand Canyon to help control the mountain lions. He earned a reputation as a legendary hunter and guided hunts and tours for the rich and famous. Passionate about wildlife, Uncle Jimmy started out as a quiet, unassuming cowboy on a cattle ranch in Texas before taking a job as a buffalo warden in Yellowstone and meeting the future president, who would change the course of his life. He spent twenty-three years acquiring himself with the rims of the Grand Canyon, where one could almost instant death, before falling into obscurity. Join author Albert Le LoConte as he delves into the fascinating life of a forgotten man.

Fundamentals of Geomorphology Richard John Ruth 2011-01-15 The extensively revised, restructured, and updated edition continues to present a fascinating an engaging and comprehensive introduction to the subject, exploring the ways in which the surface of the earth is shaped. Hashimotopoints out that, due to the diversity of processes acting on land surfaces, there is no single explanation to the nature of landscape evolution. A unique, up-to-date treatment of the subject, this third edition has been updated to include recent developments in this relatively young discipline, including the use of mathematical models in the field of geomorphology. Written in an accessible and lively manner, it includes guides to further reading, chapter summaries, and an extensive glossary of key terms. The book is also illustrated throughout with extraordinary field photography, all in colour.

Rainbow Bridge to Monument Valley Thomas J. Harvey 2013-07-29 The Colorado River Plateau is home to two of the best-known landscapes in the world, Rainbow Bridge in southern Utah and Monument Valley on the U-Arizona border. Twentieth-century popular culture made these places icons of the American West, and advertising continues to exploit their significance today. In Rainbow Bridge to Monument Valley, Thomas J. Harvey tellingly tells how Navajos and Anglo-Americans created fictions of meaning out of this stunning desert landscape, space that western novelist Zane Grey called "the doorstep of untamed years," where a rugged and authentic life beckoned. Harvey explores the different ways in which the two societies imaged the landscape with deep cultural significance. Navajos long ago incorporated Rainbow Bridge into the complex origin story that embodies their religion and worldview. In the early 1900s, archaeologists crossed paths with Grey in the Rainbow Bridge region, credited with inventing the "Americanized" Navajo, and helping define Grand Canyon in the popular imagination.

Larry Williams' contemporary world and reimagined the landscape for his own purposes. In the process, Harvey shows, Grey erased most of the Navajo inhabitants. This view of the landscape culminated in filmmaker John Ford's use of Monument Valley as the setting for his epic mid-twentieth-century Westerns. Harvey extends the story into the late twentieth century, when even the fictions Grey so carefully crafted were thrown into question, and the Navajo people once again confronted the challenge of reclaiming their landscape.

Grand Canyon’s Phantom Ranch

Robert W. Audretsch 2012 Phantom Ranch is nestled in the Grand Canyon basin on the Colorado River—a location hardly viable from the rim and only accessible after a journey through scores of geologic layers. The only way there is by river rafting, hiking, or mule, and with such foot to the problems currently plaguing these areas. Enriched by the observations of early naturalists and Johnston’s many years of fieldwork, this is a book that will be welcomed by all who care about California’s treasured forests and woodlands.

Verna R. Johnston 1996-06-16 From majestic Redwoods to ancient Western Bristlecone Pines, California’s trees have long inspired artists, poets, naturalists—and real estate developers. Verna Johnston’s splendid book, illustrated with her superb color photographs and Carla Simonson’s detailed black-and-white drawings, now offers an unparalleled view of the Golden State’s world-renowned forests and woodlands. In clear, vivid prose, Johnston introduces each of the state’s dominant forest types. She describes the unique characteristics of the trees and the interrelationships of the plants and animals living among them, and she analyses how fire, flood, fungi, weather, soil, and humans have affected the forest ecology. The world of forest and woodland animals comes alive in these pages—the mating games, predation patterns, communal life, and the microscopic environment of invertebrates and fungi are all here. Johnston also presents a sobering view of the environmental hazards that threaten the state’s trees: acid snow, ozone, blister rust, over-logging. Noting the interconnectedness of the diverse life forms within tree regions, she suggests possible answers to the problems currently plaguing these areas. Enriched by the observations of early naturalists and Johnston’s many years of fieldwork, this is a book that will be welcomed by all who care about California’s treasured forests and woodlands.

How are we to remember or restore lost places?”—BOOK JACKET.

In Wonders of Sand and Stone, Frederick H. Swanson traces the recent human story behind the creation of these places as part of a protected mini-empire of public lands. Drawing on extensive historical research, Swanson presents little-known accounts of people who saw in these sculptured landscapes something worth protecting. Readers are introduced to the region’s early explorers, scientists, artists, and travelers as well as the local residents and tourism promoters who worked with the National Park Service to build the system of parks and monuments we know today, when Utah’s national parks and monuments face challenges from increased human use and from development outside their borders. As scientists continue to uncover the astonishing diversity of life in these desert and mountain landscapes, and archaeologists and Native Americans document their rich cultural resources, the management of these federal lands remains critically important. Swanson provides us with a detailed and timely background to advance and inform discussions about what form that management should take.
