2012-12-15 Laura N. Gasaway Copyright law is a critical issue for authors, librarians, publishers, and information vendors. It is also a complex area, with many shades of gray. Librarians continually need to seek answers to questions ranging from the reproduction of copyrighted works for library users, through the performance of audiovisual works, to the digitization and display of protected works on library websites. This book presents updated versions of the author's copyright columns published in *Against the Grain*, the leading journal in acquisitions librarianship since the late 1990s. It is the first volume in the series *Charleston Insights in Library, Archival, and Information Sciences*. The aim of the *Charleston Insights* series is to focus on important topics in library and information science, presenting the issues in a relatively jargon-free way that is accessible to all types of information professionals, including librarians, publishers, and vendors, and this goal shapes the pragmatic and accessible tone of the book. The volume is presented in question-and-answer format. The questions are real, submitted by librarians, educators, and other information professionals who have attended the author's copyright law workshops and presentations or submitted them to her by e-mail or telephone. The author has selected the questions and answers that have general applicability. She has then arranged them into logical chapters, each prefaced by a short introduction to the topic. Because it is written in an accessible and clear style, readers may want to review the entire work or they can just access particular chapters or even specific questions as they need them. The volume includes an index to facilitate reference use.

2011-09-20 John A. Cornell The most comprehensive, single-volume guide to conducting experiments with mixtures "If one is involved, or heavily interested, in experiments on mixtures of ingredients, one must obtain this book. It is, as was the first edition, the definitive work." -Short Book Reviews (Publication of the International Statistical Institute) "The text contains many examples with worked solutions and with its extensive coverage of the subject matter will prove invaluable to those in the industrial and educational sectors whose work involves the design and analysis of mixture experiments." -Journal of the Royal Statistical Society "The author has done a great job in presenting the vital information on experiments with mixtures in a lucid and readable style. . . . A very informative, interesting, and useful book on an important statistical topic." -Zentralblatt für Mathematik und Ihre Grenzgebiete *Experiments with Mixtures* shows researchers and students how to design and set up mixture experiments, then analyze the data and draw inferences from the results. Virtually every technique that has appeared in the literature of mixtures can be found here, and computing formulas for each method are provided with completely worked examples. Almost all of the numerical examples are taken from real experiments. Coverage begins with Scheffe lattice designs, introducing the use of independent variables, and ends with the most current methods. New material includes: * Multiple response cases * Residuals and least-squares estimates * Categories of components: Mixtures of mixtures * Fixed as well as variable values for the major component proportions * Leverage and the Hat Matrix * Fitting a slack-variable model * Estimating components of variances in a mixed model using ANOVA table entries * Clarification of blocking mates and choice of mates * Optimizing several responses simultaneously * Biplots for multiple responses
