Controls and Automation for Facilities Managers-Viktor Boed 1998-06-23 Building owners and managers expect fully automated and energy efficient operations, on line diagnostic of systems parameters to prevent failures, and on line diagnostic of problems prior to exposing occupants to deteriorating environmental conditions. A simple HVAC control is no longer acceptable by current standards. Controls and Automation for Facilities Managers examines principles and applications of HVAC engineering, outlining information for design, development of operations, logic, systems diagnostics, and building of environmental conditions with reliability and minimum operating cost. The book moves from the principles of mechanical engineering (related to HVAC systems) through DDC applications engineering, thereby summarizing complex topics of electrical engineering for mechanical engineers. Individual chapters: Provide essential information on related mechanical (HVAC) engineering, controls strategies, and examples of basic algorithms for on line diagnostics Guide (DDC) application engineers to a more thorough understanding of mechanical engineering disciplines (i.e., the psychrometric chart) as well as guide mechanical engineers to a more thorough understanding of DDC applications engineering (i.e., direct digital controllers and systems) Outline information on current topics Discussions also include: Indoor air quality - presenting material for facilities engineers as well as controls and consulting engineers Utilities metering - describing the distribution of real time data over a network, including consumption, alarms, diagnostics, trends, and reports On line problem diagnostics - outlining HVAC and environmental problems Controls and Automation for Facilities Managers serves as an exceptional guide for facilities managers and engineers, architects and consulting engineers, vendors and contractors, and other professionals in the design, application, and implementation of controls and automation systems for industrial, educational, institutional, and governmental facilities. This reference will enhance design, systems implementation, systems operation, and maintenance, effecting the ultimate goal of its readers - implementation of fully automated environmental control systems, trouble-free operation, and optimization of operating and maintenance cost.

CIBSE Guide H: Building Control Systems-Cibse 2007-06-01 'Building Control Systems' provides the building services engineer with a comprehensive understanding of modern control systems and relevant information technology. This will ensure that the best form of control systems for the building is specified and that proper provision is made for its installation, commissioning, operation and maintenance. Beginning with an overview of the benefits of the modern building control system, the authors describe the different controls and their applications, and include advice on their set-up and tuning for stable operation. There are chapters on the practical design of control systems, how to work from the hardware components and their inclusion in networks, through to control strategies in Heating, Ventilation and Air Conditioning (HVAC) systems and whole buildings. The relationship between Building, Management Systems (BMS) and information technology systems is discussed, and the building procurement process and the importance of considering control requirements at an early stage in the design process

The Complete Guide to Human Resources and the Law offers fast, dependable, plain English legal guidance for HR-related situations from ADA accommodation, diversity training, and privacy issues to hiring and termination, employee benefit plans, compensation, and recordkeeping. It brings you the most up-to-date information as well as practical tips and checklists in a well-organized, easy-to-use resource. The 2010 Edition provides new and expanded coverage of issues such as: Discussion of the economic recovery measures under the Emergency Economic Stabilization Act of 2008, the Worker, Retiree and Employer Recovery Act of 2008, and the American Recovery and Reinvestment Act of 2009 The PBGC flat-rate premium for single employer plans for 2009 is \$34/participant The requirement of distributing Summary Annual Reports to participants and beneficiaries has been replaced by the requirement of issuing annual funding notices for most benefit plans; DOL issued a model notice and FAQs for implementing the requirement Courts continued to develop standards under Metropolitan Life Insurance v. Glenn, 128 S. Ct. 2343 (2008), for reviewing claims decisions made by decision-makers (such as plan sponsors and insurers) that have a conflict of interest because they are responsible for paying whatever claims are allowed The Children's Health Insurance Program Reauthorization Act of 2009, Pub. L. 111-3 (CHIPRA), intended to improve coordination between EGHPs and state Medicaid and SCHIP (coverage for uninsured children) plans, caused EGHP and cafeteria plans to be amended "Michellersquo;s Law, " Pub. L. 110-381, requires EGHPs to extend coverage to employees' dependent children who are covered as post-secondary students if they have to interrupt their studies for health-related reasons More states allowed same-sex couples to marry or have legally related domestic partnerships or civil unions - with implications for work-related benefit plans that cover "spouses. " The requirement of benefit parity between mental and physical illnesses was made permanent by EESA The HITECH Act (Health Information Technology for Economic and Clinical Health; part of ARRA) was enacted to strengthen the privacy and security rules under HIPAA, and to promote broader usage of electronic medical records. State Attorneys General now have the power to enforce HIPAA through suits in federal court. The Lilly Ledbetter Fair Pay Act (Pub. L. 111-2) was enacted. It increases the number of employment discrimination suits that can be brought by reversing the Supreme Court's decision that the timing rules for lawsuits begin when an allegedly discriminatory practice is adopted. The Supreme Court extended its string of pro-arbitration cases by ruling in 14 Penn Plaza LLC v. Pyett, 129 S. Ct. 1456 (4/1/09), that a collective bargaining agreement clause that clearly obligates union members to arbitrate ADEA claims is enforceable. The Supreme Court held that federal labor law preempts a California law that forbade employers that receive state contracts or other funding to discuss union matters with employees. As long as employers avoid coercion, federal law seeks to promote wide-open debate on labor issues: Chamber of Commerce v. Brown, 128 S. Ct. 2408 (2008). Another Supreme Court ruling discussed allows unions to charge non-members who pay agency fees in lieu of joining the union amounts representing certain expenses of national litigation: Locke

Sick Building Syndrome-Jack Rostron 2005-08-04 Sick building syndrome is for many of us an enigma. The legislative precedents currently being set in North America underline the need for rational examination of the problem. This new collection of expert writing will help unravel the complex issues involved. The book explores sick building syndrome from a range of perspectives: architectural, medical, psychological and legal. Each chapter offers detailed insights into the condition and taken together they highlight the need for a collaborative approach. The effects of sick building syndrome should not be underestimated as it is thought that up to 30 percent of refurbished buildings may suffer from the condition. Extreme cases may lead to increased absenteeism among employees, reduced performance and ultimately building closure.
