*Responsive Web Design with Adobe Photoshop*-Dan Rose 2015-01-12 For a couple of decades now, designers have used Photoshop to mock up Web page designs. However, that work generally results in a static graphic of the page, which has to be translated by a developer into the components of a Web page: HTML files and Web-compatible image files. Our multi-device world has shown us that this approach to web design, including full-page comps done in Photoshop, is increasingly problematic. Modern web designers are adopting a new approach: creating flexible web pages whose layout can adapt to suit the screen on which they are displayed. This is "Responsive Web Design" [RWD]. Until now, books on designing responsive Web sites have focused on HTML and CSS - in other words, they've been very code-centric, and visual creativity seems to take a back seat. This new book is aimed at the visual Web designer who's accustomed to working in Photoshop. Adobe Photoshop CC contains many new features that help streamline the process of converting a static page design to a set of components for a responsive web page. Dan Rose is one of the best-known advocates of this new way of working in Photoshop. He's observed that only a few people are talking about Photoshop for RWD constructively, yet a majority (63% as of his last informal poll) of web designers are using Photoshop for more than simple asset creation. This transition is a pain point for many designers. His new book will balance coverage of conceptual issues (how to fit tools like Photoshop to the design workflow rather than fitting a workflow to the tools) with practical design exercises tailored to help communicate the overall design direction of the page while respecting the needs of the fluid Web. In addition, he will introduce methods for taking HTML back into Photoshop for further refinement.

*The Library Mobile Experience*-Bohyun Kim 2013 How are libraries meeting the evolving needs of mobile users? According to comScore, the smartphone is in the "late majority stage of technology adoption curve." And people don't turn to their devices only for quick facts when on the move: 93 percent of mobile users access the Internet from home on their devices; what's more, Pew reports that 63 percent of Americans age 16 and over would use app-based access to library materials and programs if they were available. In this issue of *Library Technology Reports*, Kim shows how leading libraries are meeting these evolving needs. Topics include: 6 steps to improving your mobile website Analysis of the advantages and challenges of the responsive Web Comparison of user perceptions of web apps and native apps Visual review of the changes in the libraries mobile web implementation since 2010 Results of MIT surveys of more than 15,000 patrons in 2008 and 2011 Tips for simplifying mobile's complexity
