2011-10-31 M. Scott Peck The culmination of a lifetime of counselling, lecturing and writing, M. Scott Peck's major work leads us to a deeper awareness of how to live rich, fulfilling lives in a world fraught with stress, worry and anxiety. Writing with a depth of understanding that comes with the seasoned perspective of age, Dr Peck continues the journey of spiritual growth that began with *The Road Less Travelled*, one of the most influential personal development books of modern times. To the famous opening line of that book - 'Life is difficult' he now adds 'Life is complex'. But the greatest challenge, he reminds us, is to learn to deal with life's conflicts, problems and paradoxes to find the true simplicity that lies on the other side of complexity. The journey to serenity and inner peace, Dr Peck writes, can only be made with increasing self-awareness and social awareness. There are no easy answers for complex problems. The work of learning and spiritual growth is

hard. And yet he shows us that there is a way to think with integrity, to know the difference between good and evil, to overcome narcissism, to love and be loved, to live with paradox, to accept the consequences of our actions all through life, and to come to terms with dying and death.

Summary! The first chapter begins with Daniel Kahneman's description of two main characters of the book, neither of which are people. He refers to something that he calls System 1 and System 2. System 1 is dedicated to thinking fast. It almost solely relies on intuition and almost entirely disregards information. System 1 is in control every time we do an activity that requires quick thinking and reactions. For example, System 1 is in control when we drive, when we want to read other people's facial expressions, when we answer to questions that require quick answers, etc. Kahneman states that System 1 is involuntary and operates entirely on its own. System 2 thinks slowly and always relies on information and almost never on intuition. System 2 is in control when we try to solve difficult math problem, when we want to focus our attention on the voice of person in a room full of people, when we fill in tax forms, or during any other events that are based on awareness. System 2 requires energy, because it operates voluntarily. Kahneman expresses the importance of making it a habit to train our brains into using the right way of "thinking" as we make decisions, as utilizing the wrong thinking system can lead to poor or even disastrous consequences. Kahneman, through intensive behavioral study, has determined that people are more successful if they can lean on the Slow Thinking method. Kahneman teaches his proven theory simply, and includes a plan of action for learning to train the brain to use the correct "thinking" system. This novel takes a fascinating look at behaviors that can change our lives - personally,

professionally, and financially. It is a book you should read to improve and utilize your thinking system the right way.

2021-05-31 Shortcut Edition * Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. *As you read this summary, you will learn what the author understood from the many experiences he had with the way we think and make decisions. He carried out these experiments with the help of psychologists and economists. *You will also discover : that the result of these analyses has made it possible to determine two systems of thought; that intuition and reflection are two separate functions; that very

often we act without thinking and that the decisions we make "without thinking" are not necessarily bad; that the optimism inherent in human nature leads us towards capitalism; that decision-making involves both systems of thought. *The purpose of this book is to distinguish between intuition and reflection, the "two speeds of thought" that Daniel Kahneman calls System 1 (intuition) and System 2 (reflection). *Without going so far as to say that Man has two brains, he details, with the help of his experiences, the capital differences of these two ways of thinking and shows that these two systems can sometimes be in competition but also prove to be complementary. Daniel Kahneman specifies that most of his research was done with Amos Tversky, an Israeli psychologist who has since passed away. *Other psychologists call this "Fast Thinking" (intuition) and "Slow Thinking" (reflection) but the author prefers to call the two systems because their processes are very different. It is these two systems that will be analyzed in this book. His experiments do not necessarily follow a logic of sequence and do not necessarily have links between them. *Buy now the summary of this book for the modest price of a cup of coffee!
