Loanwords in the World's Languages-Martin Haspelmath 2009-12-22 This book is the first work to address the question of what kinds of words get borrowed in a systematic and comparative perspective. It studies lexical borrowing behavior on the basis of a world-wide sample of 40 languages, both major languages and minor languages, and both languages with heavy borrowing and languages with little lexical influence from other languages. The book is the result of a five-year project bringing together a unique group of specialists of many different languages and areas. The introductory chapters provide a general up-to-date introduction to language contact at the word level, as well as a presentation of the project's methodology. All the chapters are based on samples of 1000-2000 words, elicited by a uniform meaning list of 1460 meanings. The combined database, comprising over 70,000 words, is published online at the same time as the book is published. For each word, information about loanword status is given in the database, and the 40 case studies in the book describe the social and historical contact situations in detail. The final chapter draws general conclusions about what kinds of words tend to get borrowed, what kinds of word meanings are particularly resistant to borrowing, and what kinds of social contact situations lead to what kinds of borrowing situations.

The Culture-Bound Syndromes-Ronald C. Simons 2012-12-06 In the last few years there has been a great revival of interest in culture-bound psychiatric syndromes. A spate of new papers has been published on well known and less familiar syndromes, and there have been a number of attempts to put some order into the field of inquiry. In a review of the literature on culture-bound syndromes up to 1969 Yap made certain suggestions for organizing thinking about them which for the most part have not received general acceptance (see Carr, this volume, p. 199). Through the seventies new descriptive and conceptual work was scarce, but in the last few years books and papers discussing the field were authored or edited by Tseng and McDermott (1981), Al-Issa (1982), Friedman and Faguet (1982) and Murphy (1982). In 1983 Favazza summarized his understanding of the state of current thinking for the fourth edition of the Comprehensive Textbook of Psychiatry, and a symposium on culture-bound syndromes was organized by Kenny for the Eighth International Congress of Anthropology and Ethnology. The strong est impression to emerge from all this recent work is that there is no substantive consensus, and that the very concept, "culture-bound syndrome" could well use some serious reconsideration. As the role of culture-specific beliefs and practices in all affliction has come to be increasingly recognized it has become less and less clear what sets the culture-bound syndromes apart.
