Public Budgeting Systems-Robert D. Lee 2004 A complete and balanced reference, this timely resource surveys the current state of budgeting throughout all levels of the United States government. The text emphasizes methods by which financial decisions are reached within a system as well as ways in which different types of information are used in budgetary decision-making. It also stresses the use of program information, since, for decades, budget reforms have sought to introduce greater program considerations into financial decisions. Public Budgeting Systems, Seventh Edition retains the structure of the sixth edition yet gives increased attention to topics such as program information and government's role in the economy and has been updated with all new tables and exhibits. Using this text, students will gain a first-rate understanding of methods by which financial decisions are reached within a system, and how different types of information are used in budgetary decision-making.

The Making of Information Systems-Karl E. Kurbel 2008-04-24 Information systems (IS) are the backbone of any organization today, supporting all major business processes. This book deals with the question: how do these systems come into existence? It gives a comprehensive coverage of managerial, methodological and technological aspects including: Management decisions before and during IS development, acquisition and implementation Project management Requirements engineering and design using UML Implementation, testing and customization Software architecture and platforms Tool support (CASE tools, IDEs, collaboration tools) The book takes into account that for most organizations today, inhouse development is only one of several options to obtain an IS. A good deal of IS development has moved to software vendors - be it domestic, offshore or multinational software firms. Since an increasing share of this work is done in Asia, Eastern Europe, Latin America and Africa, the making of information systems is discussed within a global context.

Organizational Information Systems in the Context of Globalization-Mikko Korpela 2013-03-09 Organizational Information Systems in the Context of Globalization exemplifies the role of social theory in approaching ICT utilization challenges in a globalization context. The debates raised on implementation, policy,

organizations and organizing, and social dynamics, increase our awareness of the diversity of perspectives we need to delve into when framing the role of ICTs in the globalization agenda. The equal representation of managerial and non-managerial decision making contexts alerts us to the fact that ICTs should not be considered only as a corporate wealth creation prerogative. This book contains the selected proceedings of the Working Conference on Information Systems Perspectives and Challenges in the Context of Globalization, sponsored by the International Federation for Information Processing (IFIP) and held in Athens, Greece in June 2003.
