Cognitive Foundations of Musical Pitch-Department of Psychology Cornell University Carol L. Krumhansl Associate Professor 1990-03-15 This book addresses the central problem of music cognition: how listeners' responses move beyond mere registration of auditory events to include the organization, interpretation, and remembrance of these events in terms of their function in a musical context of pitch and rhythm. Equally important, the work offers an analysis of the relationship between the psychological organization of music and its internal structure. Combining over a decade of original research on music cognition with an overview of the available literature, the work will be of interest to cognitive and physiological psychologists, psychobiologists, musicians, music researchers, and music educators. The author provides the necessary background in experimental methodology and music theory so that no specialized knowledge is required for following her major arguments.

Expert Failure-Roger Koppl 2018-02-08 Roger Koppl develops a theory of experts and expert failure, and illustrates his theory with wide-ranging examples, including that of state regulation of economic activity.

Historians as Expert Judicial Witnesses in Tobacco Litigation-Ramses Delafontaine 2015-04-23 Historian Ramses Delafontaine presents an engaging examination of a controversial legal practice: the historian as an expert judicial witness. This book focuses on tobacco litigation in the U.S. wherein 50 historians have witnessed in 314 court cases from 1986 to 2014. The author examines the use of historical arguments in court and investigates how a legal context influences historical narratives and discourse in forensic history. Delafontaine asserts that the courtroom is a performative and fact-making theatre. Nonetheless, he argues that the civic responsibility of the historian should not end at the threshold of the courtroom where history and truth hang in the balance. The book is divided into three parts featuring an impressive range of European and American case studies. The first part provides a theoretical framework on the issues which arise when history and law interact. The second part gives a comparative overview of European and American examples of forensic history. This part also reviews U.S. legal rules and case law on expert evidence, as well as extralegal challenges historians face as experts. The third part covers a series of tobacco-related trials. With remunerations as high as hundreds of thousands of dollars and no peer-reviewed publications or communication on the part of the historians hired by the tobacco companies the question arises whether some historians are willing to trade their reputation and that of their university for the benefit of an interested party. The book further provides 50 expert profiles of the historians active in tobacco litigation, lists detailing the manner of the expert's involvement, and West Law references to these

cases. This book offers profound and thought-provoking insights on the post-war forensicization of history from an interdisciplinary perspective. In this way, Delafontaine makes a stirring call for debate on the contemporary engagement of historians as expert judicial witnesses in U.S. tobacco litigation.

Deep Learning in Natural Language Processing-Li Deng 2018-05-23 In recent years, deep learning has fundamentally changed the landscapes of a number of areas in artificial intelligence, including speech, vision, natural language, robotics, and game playing. In particular, the striking success of deep learning in a wide variety of natural language processing (NLP) applications has served as a benchmark for the advances in one of the most important tasks in artificial intelligence. This book reviews the state of the art of deep learning research and its successful applications to major NLP tasks, including speech recognition and understanding, dialogue systems, lexical analysis, parsing, knowledge graphs, machine translation, question answering, sentiment analysis, social computing, and natural language generation from images. Outlining and analyzing various research frontiers of

NLP in the deep learning era, it features self-contained, comprehensive chapters written by leading researchers in the field. A glossary of technical terms and commonly used acronyms in the intersection of deep learning and NLP is also provided. The book appeals to advanced undergraduate and graduate students, post-doctoral researchers, lecturers and industrial researchers, as well as anyone interested in deep learning and natural language processing.

Methods and Models in Artificial and Natural Computation. A Homage to Professor Mira's Scientific Legacy-Jose Mira 2009-06-12 Continuing Professor Mira's Scientific Navigation Professor Jos´ e Mira passed away during the preparation of this edition of the International Work-Conference on the Interplay Between Natural and Artificial Computation. As a pioneer in the field of cybernetics, he enthusiastically promoted interdisciplinary research. The term cybernetics stems from the Greek *kybernetes* (kybernetes), which means steersman, governor, or pilot, the same root as government. Cybernetics is a broad field of study, but the essential goal of cybernetics is to understand and define the functions and processes of systems that have goals, and promote circular, causal chains that move from action to sensing to comparison with a desired goal, and again to action. These definitions can be applied to Prof. Mira. He was a leader, a pilot, with a visionary and extraordinary capacity to guide his students and colleagues to the desired objective. In this way he promoted the study and understanding of biological functions for creating new computational paradigms able to solve known problems in a more efficient way than classical approaches. But he also impressed his magnificent and generous character on all the researchers and friends that worked with him, imprinting in all of us high requirements of excellence not only as scientists, but also as human beings. We all remember his enthusiastic explanation about the domains and levels in the computational paradigm (CP).

Handbook of Research on Counterfeiting and Illicit Trade-Peggy E. Chaudhry 2017-07-28 This unique Handbook provides multiple perspectives on the growth of illicit trade, primarily exploring counterfeits and internet piracy. It includes expert opinion on a wide range of topics including the evaluation of key global enforcement issues, government and private-sector agency initiatives to stifle illicit trade, and the evolution of piracy on the internet. The authors also assess the efficacy of anti-counterfeiting strategies such as targeted consumer campaigns, working with intermediaries in the supply chain, authentication technology, and online brand protection.

Vertigo-Clinical Practice and Examination-Philip Rajan Devesahayam 2013-12-15 This book Vertigo: Clinical Practice and Examination is written for a wide audience of physicians involved in the management of dizzy patients. This handbook caters for three groups of professionals. First, the primary care physician who is often the first expert to be consulted for this complaint; and second, the specialists involved in the management of dizzy patients in particular otorhinolaryngologists, and neurologists; and finally, for students and allied health personnel. The aim of this handbook is to serve as a quick reference or introduction to the key concepts in Vertigo. This handbook describes step-wise key-concepts in assessing, diagnosing and managing common peripheral vestibular disorders. Begins with introduction to key terms, causes of dizziness, the text then describes vestibular disorders, examination, investigation, principles of management and guide for managing dizzy patients. This book fully coloured illustrations and charts, which help to explain difficult concepts in vertigo.

Yanomami-Rob Borofsky 2005-01-31 Yanomami raises questions central to the field of anthropology—questions concerning the practice of fieldwork, the production of knowledge, and anthropology's intellectual and ethical vision of itself. Using the Yanomami controversy—one of anthropology's most famous and explosive imbroglios—as its starting point, this book draws readers into not only reflecting on but refashioning the very heart and soul of the discipline. It is both the most up-to-date and thorough public discussion of the Yanomami controversy available and an innovative and searching assessment of the current state of anthropology. The Yanomami controversy came to public attention through the publication of Patrick Tierney's best-selling book, *Darkness in El Dorado*, in which he accuses James Neel, a prominent geneticist who belonged to the National Academy of Sciences, as well as Napoleon Chagnon, whose introductory text on the Yanomami is perhaps the best-selling anthropological monograph of all time, of serious human rights violations. This book identifies the ethical dilemmas of the controversy and raises deeper, structural questions about the discipline. A portion of the book is devoted to a unique roundtable in which important scholars on different sides of the issues debate back and forth with each other. This format draws readers into deciding, for themselves, where they stand on the controversy's—and many of anthropology's—central concerns. All of the royalties from this book will be donated to helping the Yanomami improve their healthcare.
