Model Boats From The Tomb Of Tutankhamun

Model Boats from the Tomb of Tut’ankhamūn-Dilwyn Jones 1990 This volume publishes the thirty-five wooden model boats found in the tomb of Tutankhamun, the only complete group known from the 18th Dynasty. It also includes a study of eleven magical oars discovered in the Burial Chamber. Boats-Dilwyn Jones 1995-01-01 Drawing on archaeological and literary evidence, Dilwyn Jones examines the importance of the boat in Egyptian ritual and belief, as well as in everyday life. The sun god was thought to travel across the sky in a solar boat, and Egyptians believed that the deserving might join the god Osiris in his divine bark after death. Boats played an important part in funerary ritual; models were often placed in tombs to provide the deceased with safe passage through the Winding Waterway in the underworld. Also, boats are frequently depicted in tomb paintings. The Nile has always been a vital transport artery for Egypt and boats the principal means of travel. Early papyrus skiffs gradually gave way to wooden craft of increasing size and sophistication, ranging from fishing boats and barges to seagoing warships, splendid ships of state and enormous obelisk barges used to transport stone to temples and monuments. Dilwyn Jones traces the development of the different types of boats and the techniques of their construction through the Old, Middle, and New Kingdom periods. The book is illustrated with photographs of boat models and paintings and with line drawings.

Boats of the World-Seán McGrail 2001 'For those who wish to explore further, this book will enable them; for the general reader it stands alone as a beacon for its subject.' -Maritime Life and Traditions'As a general introduction to early watercraft the book is a pioneer effort, and it has much information to offer. McGrail has assembled a hugh amount of material which is handled in a clear and systematic way.' -International Journal of Nautical Archaeology'The book is a valuable reference work, and a good introduction to the subject.' -International Journal of Nautical Archaeology'The great value of this book lies in the consistent and high-quality descriptions of the rafts, boats and ships themselves, and for those who have an interest in any aspects of prehistoric or early historic water transport, Boats of the World provides an excellent source of information.' -Robert Van De Noort'Boats of the World is a true tour de force by Professor Sean McGrail, a world authority in the field of maritime archaeology.' -Robert Van De Noort, Antiquaries Journal'Seán McGrail is Britain's leading authority on maritime archaeology... Here he provides a substantial base for the integration of the maritime subdivision of archaeology into its proper place as part of the mainstream of the discipline.' -Basil Greenhill, Times Literary Supplement'This is a joyous source book for anyone who appreciates academic clarity.' -Colin Mudie, Journal of Navigation'A large work of distinguished scholarship by a senior maritime archaeologist.' -Colin Mudie, Journal of Navigation'Classic and magnificent work.' -Colin Mudie, Journal of Navigation'In short, Professor McGrail offers us an extraordinary encyclopaedia of nautical archaeology based on extensive documentation.' -Eric Rieth, Neptunia'A superb, long-awaited book, of unique methodological richness, incorporating the latest research, taking account of all the 'nautical civilisations' of Egypt, Arabia, the Mediterranean, Atlantic Europe, Australia, Southeast Asia, Oceania, China, America.' -Eric Rieth, Neptunia'This is the first comprehensive study of the archaeology of rafts, boats, and ships from the Stone Age to Medieval times. All the regions of the world are covered, from Atlantic Europe and the Mediterranean to the Indian Ocean, the China Sea, and the Pacific. Archaeology and the Social History of Ships-Richard A. Gould 2011-04-29 Maritime archaeology deals with shipwrecks and is carried out by divers rather than diggers. It embraces maritime history
and analyses changes in shipbuilding, navigation and seamanship and offers fresh perspectives on the cultures and societies that produced the ships and sailors. Drawing on detailed past and recent case studies, Richard A. Gould provides an up-to-date review of the field that includes dramatic new findings arising from improved undersea technologies. This second edition of Archaeology and the Social History of Ships has been updated throughout to reflect new findings and new interpretations of old sites. The new edition explores advances in undersea technology in archaeology, especially remotely operated vehicles. The book reviews many of the major recent shipwreck findings, including the Vasa in Stockholm, the Viking wrecks at Roskilde Fjord and the Titanic. Transport in Ancient Egypt-Robert B. Partridge 1996 The Nile was the main highway through Egypt, and the ancient Egyptians built huge boats to transport heavy materials. Some full-scale examples of these ships, and the chariots used for land transportation, have survived, as this book shows Architectural Model as Machine-Albert Smith 2007-03-30 This book offers an explanation of why scale models are important to the design process. Albert Smith takes the reader through the history and significance of models in architecture from the magic of the Egyptian scale model to the present day. Through this description of the relationship between architecture and the scale model, Smith demonstrates the most effective process between concept and 'machine', between the idea and the final building. The great value of this book is to reveal the nature of the scale model and to unlock the tremendous potential of this design tool as a thinking and communicative advice. His chronological analysis goes on from Egypt through Rome to the relationship between the Greek paradigm scale model and then on to Medieval and Renaissance models. It concludes with the models of the Spanish architect Antonio Gaudi, the Russian Constructivists, the American architect Louis Khan and finally looks at the role of scale models in the present day through the work of the Polish/American architect Daniel Libeskind and the American Frank Gehry.

Deciphering EgyptOCOs past, from pre-historic times until Rome”s conquest in AD 30, Ana Ruiz reveals countless details about one of the earliest civilizations, piecing together a mosaic that accumulates to give an intriguing portr" Following Osiris-Mark Smith 2017 Osiris, god of the dead, was one of ancient Egypt’s most important deities. The earliest secure evidence for belief in him dates back to the fifth dynasty (c.2494-2345BC), but he continued to be worshipped until the fifth century AD. Following Osiris is concerned with ancient Egyptian conceptions of the relationship between Osiris and the deceased, or what might be called the Osiran afterlife, asking what the nature of this relationship was and what the prerequisites were for enjoying its benefits. It does not seek to provide a continuous or comprehensive account of Egyptian ideas on this subject, but rather focuses on five distinct periods in their development, spread over four millennia. The periods in question are ones in which significant changes in Egyptian ideas about Osiris and the dead are known to have occurred or where it has been argued that they did, as Egyptian aspirations for the Osiran afterlife took time to coalesce and reach their fullest form of expression. An important aim of the book is to investigate when and why such changes happened, treating religious belief as a dynamic rather than a static phenomenon and tracing the key stages in the development of these aspirations, from their origin to their demise, while illustrating how they are reflected in the textual and archaeological records. In doing so, it opens up broader issues for exploration and draws meaningful cross-cultural comparisons to ask, for instance, how different societies regard death and the dead, why people convert from one religion to another, and why they abandon belief in a god or gods altogether.
A Year in the Life of Ancient Egypt-Ann Rosalie David 2015-04-16 Based on years of prestigious academic work, Professor Rosalie David cleverly presents every aspect of life in ancient Egypt through the lives of various characters, all based on mummies from the Manchester Museum whom Professor Rosalie David has led the study of. Characters hail from all walks of life, including royalty, nobles, officials, craftsmen and peasants, allowing us an insight into absolutely every aspect of everyday, ritual and religious life in ancient Egypt. The book provides an overview of the many dynasties and kingdoms of ancient Egypt before beginning to tell the story of the lives of one family. All three seasons of inundation, planting and growing, and harvesting are covered as well as all ritual and religious events, including birth and death. The book is extremely easy to read and digest, however, the attention to detail and the vivid picture of life which we are able to build makes it clear that this book has been written by one of the leading authorities in Egyptology and mummy research. The mummies are currently on a tour of the US titled 'Mummies of the World 2' and will return to Manchester following this tour.

Egypt, Trunk of the Tree, Vol. II-Simson Najovits 2003 In the first of a planned two volumes, Najovits, former editor in chief of Radio France International, provides a remarkably evenhanded introductory survey of Egypt. He observes that the earliest Egyptian culture, with the introduction of farming and animal husbandry, can be traced to around 5800 B.C., but his own overview begins around 4000 B.C., with an investigation of the predynastic Naqada culture and its religious system of totemism, animism and magic. Najovits contends that scholarly focus on ancient Greece and Rome and on Christianity and Judaism has tended to obscure Egyptian contributions to the development of culture. Egyptian religion was highly original, he says: "Never before had such an elaborate religion and such an all-inclusive mythology been invented." As to its lasting contributions, the Egyptians, he says, invented the belief that the body could be preserved and stay alive after death. They were also, he claims, the first monotheistic culture, although monotheism waxed and waned under various pharaohs. They developed a belief in a savior god, Osiris, whose resurrection led to a belief in the afterlife. Najovits even concludes that the holy family of Osiris, Isis and Horus offers the mythological foundations upon which later cultures constructed their own foundational holy families (e.g., Jesus, Mary and Joseph). Egypt also provided examples of early jurisprudence and political systems, primarily in its extensive legal codes and its focus on kingship. On balance, Najovits offers a detailed and original historical survey of Egypt as a cradle of civilization. Publishers Weekly

Middle Kingdom Tomb Architecture at Lisht-Dieter Arnold 2008 This volume documents twenty-six monumental tombs of the ancient Egyptian Twelfth Dynasty that were excavated by the Metropolitan Museum Egyptian Expedition from 1906 to 1934 and 1984 to 1991. Focusing on the study and reconstruction of the architecture of the tombs, the book also publishes remains of reliefs and inscriptions that decorated the walls. The author demonstrates the astonishing variety of Middle Kingdom funeral architecture. Whereas some of the Lisht structures relate closely to Old Kingdom mastabas, there is also a new group of freestanding chapels that are derived from contemporary deity temples and foreshadow the temple-tombs of later periods in Egyptian history. Also included is an appendix by James P. Allen on the biographical inscription in one of the tombs

Ancient Machine Technology-Mary B. Woods 2011-03-01 Machine technology is as old as human society itself. The first humans on Earth used basic machines. They used stone axes to butcher meat. They use levers to pry roots and rocks from the ground. Over the centuries, ancient peoples learned to make more complicated machines. People in the ancient Middle East devised wheels and pulleys. The ancient Chinese created wheelbarrows and bellows. The ancient Greeks built big war machines. What kinds of tools and techniques did ancient craftspeople use? Which methods worked and which didn’t? And how did ancient machines set the stage for our own modern machines? Learn more in Ancient Machine Technology.

What Do Science, Technology, and Innovation Mean from Africa?-Clapperton Chakanetsa Mavhunga 2017-06-16 Clapperton Mavhunga’s collection of essays about science, technology, and innovation (STI) from an African perspective opens with the idea, “Things do not (always) mean the same from everywhere; when we insist that only ‘our’ meaning is the meaning, we silence other people's meanings.” Mavhunga and his contributors argue that our contemporary definitions of STI are those of countries and cultures that have acquired their dominance of others through global empires, and as a counter to that, Mavhunga seeks to put the concepts of STI into question, exploring what the technological, scientific, and innovative might mean from Africa in lieu of outside introductions or influences. We strongly feel that this book is suited to the Knowledge Unlatched program because of the difficulty of reaching markets and readers in Africa with print books. We feel unlatching would go a long way toward helping Mavhunga reach an important audience for this work that we have been previously unable to reach.

The colour blue in historic shipbuilding-Joachim Müllerschön 2019-02-27 The use of the colour blue in historical shipbuilding raises many questions. Lake Biwa: Interactions between Nature and People-Hiroya Kawanabe 2012-05-24 This book focuses on the long-term interactions between people and nature in and around Lake Biwa, one of the oldest lakes in the world. Accordingly, it not only covers the characteristics of the biota of this ancient lake, but also approaches it as a ‘cultural ancient lake.’ Furthermore, various problems affecting the lake, especially recent environmental changes that occurred before and after Japan’s rapid economic growth of the 1950s and 60s, are reviewed, including water pollution, lakeshore development and the reclamation of attached lakes, alien and invasive species, and problems related to the recent warming of the climate. Lastly, by analyzing data on these problems collected by the local government and residents of the lake basin, the book provides a comprehensive outlook on the future of Lake Biwa and people’s lifestyles. As such, it provides indispensable information for all people engaged in improving and conserving water regimes around the world, as well as people interested in the culture and history of Japan.

Maritime Networks in the Mycenaean World-Thomas F. Tartaron 2013-05-27 In this book, Thomas F. Tartaron presents a new and original reassessment of the maritime world of the Mycenaean Greeks of the Late Bronze Age. By all accounts a seafaring people, they enjoyed maritime connections with peoples as distant as Egypt and Sicily. These long-distance relations have been celebrated and much studied; by contrast, the vibrant worlds of local maritime interaction and exploitation of the sea have been virtually ignored. Dr Tartaron argues that local maritime networks, in the form of 'coastscapes' and 'small worlds', are far more representative of the true fabric of Mycenaean life. He offers a complete template of conceptual and methodological tools for recovering small worlds and the communities that inhabited them. Combining archaeological, geoarchaeological and anthropological approaches with ancient texts and network theory, he demonstrates the application of this scheme in several case studies. This book presents new perspectives and challenges for all archaeologists with interests in maritime connectivity.
