Political and Economic Determinants of Population Health and Well-being: Vicente Navarro 2004

Navarro (health and public policy, sociology, policy studies, Johns Hopkins and Pompeu Fabra U., Spain) and Muntaner (behavioral and community health nursing, epidemiology, preventive medicine, U. of Maryland, Baltimore) have gathered these essays to describe the increasing health inequalities across social class, race, gender, neighborhoods, count

Political and Economic Determinants of Population Health and Well-Being:-Vincente Navarro 2020-11-25

The field of social inequalities in health continues its vigorous growth in the early years of the 21st century. This volume, following in the footsteps of Vicente Navarro's edited collection The Political Economy of Social Inequalities, is a compilation of recent contributions to the areas of social epidemiology, health disparities, health economics, and health services research. The overarching theme is to describe and explain the evergrowing health inequalities across social class, race, and gender, as well as neighborhood, city, region, country, and continent. The approach of this book is distinctly multi-, trans-, and interdisciplinary: the fields of public health, population health, epidemiology, economics, sociology, political science, philosophy, medicine, and history are all represented here.
Political and Economic Determinants of Budget Deficits in the Industrial Democracies- 1988

Political and Economic Determinants of Budget Deficits in the Industrial Democracies-Nouriel Roubini 1988 This paper focuses on the management of fiscal deficits and the public debt in the industrial democracies. Given the large deficits in many OECD countries in recent years, and the resulting sharp rise in the public debt, it is important to determine the economic and political forces leading to such large deficits. We find only partial support for the "equilibrium approach to fiscal policy", which assumes that tax rates are set over time in order to minimize the excess burden of taxation. Tax rates do not seem to be smoothed, and budget deficits in many countries in recent years appear to be too large to be explained by appeal to transitory increases in government spending. We suggest that in several countries the slow rate at which the post-'73 fiscal deficits were reduced resulted from the difficulties of political management in coalition governments. There is a clear tendency for larger deficits in countries characterized by a by a short average tenure of government and by the presence of many political parties in a ruling coalition.

The Political Economy of Natural Resources and Development-Paul A. Haslam 2016-02-05 The Political Economy of Resources and Development offers a unique and multidisciplinary perspective on how the commodity boom of the mid-2000s reshaped the model of development throughout Latin America and elsewhere in the developing world. Governments increased taxes and royalties on the resource sector, the nationalization of foreign firms returned to the mainstream economic policy agenda, and public spending on social and developmental goals surged. These trends, often described as resource nationalism,
have developed into a strategy for economic development, generated a re-imagining of the state and its institutional possibilities, and created a new but very significant political risk for extractive enterprises. However, these innovations, which constitute the most dramatic change in development policy in Latin America since the advent of neoliberalism, have so far received little attention from either academic or policy-oriented publications. This book explores the reasons behind these policies, and their effects on states, firms, and development trajectories. This text brings together renowned thematic experts to examine the political-economic causes of resource nationalism, as well as its manifestation in six Latin American countries. The causal variables considered by the contributors to this collection include a range of political-economic determinants of policy including commodity prices; the influence of ideology and national politics; ideas about industrial policy; relations between host governments and investors; and how countries respond to opportunities provided by regional initiatives and the new geography of the global economy. This volume is essential reading in development economics, political economy, and Latin American studies, as well as for those who want to understand what economic development means after neoliberalism.

'Amicable Solutions' in Trade Defence. What are the Political Economic Determinants of Accepting Price Undertakings in the EU?-Dominik Kümmerle 2015-12-11 Master's Thesis from the year 2015 in the subject Economics - Foreign Trade Theory, Trade Policy, grade: Distinction, London School of Economics (European Institute), language: English, abstract: When it comes to concluding a trade defence proceeding in the European Union (EU), the regulations allow for three alternative outcomes: (1) a termination without measures, (2) the imposition of a protective duty or (3) the acceptance of a price undertaking. Price undertakings are voluntary offers by foreign exporters to revise their prices so that the Commission is satisfied that the subsidization or dumping margin and their injurious effects are removed. Some welfare economists have concluded that 'a rational policy maker will always prefer duties' (Pauwels and Springael, 2002, 135). Thus, there is no rationale for price undertakings from an income maximization perspective. However, others have highlighted the role of price undertakings as a diplomatic tool in the EU's neighbourhood policy, which is powerfully evidenced by a sharp decline in the frequency of price undertakings after the EU's Eastern enlargement in 2004 (Appendix 1). Yet, a paradox persists: Out of fourteen price undertakings accepted between 2006 and 2015, only four accounted for countries in the EU's immediate neighbourhood. In contrast, price undertakings were accepted by ten countries that fell outside of Europe, with the BRIC countries accounting for nine, and China alone for five (Appendix 2). In response to this paradox, the paper reviews the following question: What are the political economic determinants of accepting price undertakings in the EU? I find the acceptance of price undertakings arises from an institutional conflict that can be foreign induced. In contrast to judicialized systems, an incomplete delegation of trade defence in the EU has led to a politicization of the trade defence proceeding.
This is characterized through the empowerment of three veto-players: Community industry, Commission, and Council. Powerful foreign parties actively capitalize on the engagement of political actors and - in an effort to achieve a less harmful outcome than duties - influence the three veto-players. Eventually, price undertakings are accepted by the Commission, if only the Council signals to exert its veto-rights.

The Determinants of Arab Economic Development (RLE Economy of Middle East)-Yusuf A. Sayigh 2014-10-30 This book explores in depth the factors determining economic development in the Arab region. The particular factors relevant to the Arab world are also set within the context of the broad political economy of underdevelopment. The factors are identified as comprising three main groups: economic, political administrative and socio-cultural; petroleum and regional Arab economic development are examined separately. The force and operation of each determinant is further assessed in the context of the individual countries, from which the author is able to arrive at some important conclusions concerning the interaction of these determinants and their impact upon development. First published in 1978.

Political and Economic Determinants of Romanian Foreign Policy in the Middle East-Abraham Fox 1980
The Political Economy of American Trade Policy-Anne O. Krueger 2007-12-01 Exploring the political and economic determinants of trade protection, this study provides a wealth of information on key American industries and documents the process of seeking and conferring protection. Eight analytical histories of the automobile, steel, semiconductor, lumber, wheat, and textile and apparel industries demonstrate that trade barriers rarely have unequivocal benefits and may be counterproductive. They show that criteria for awarding protection do not take into account the interests of consumers or other industries and that political influence and an organized lobby are major sources of protection. Based on these findings, a final essay suggests that current policy fails to consider adequately economic efficiency, the public good, and indirect negative effects. This volume will interest scholars in economics, business, and public policy who deal with trade issues.

Policy Systems in an Australian metropolitan region-Michael Berry 1984
The Social, Political and Economic Determinants of a Modern Portrait Artist, Bernard Fleetwood-Walker (1893-1965).-Marie Considine 2012 As the first major study of the portrait artist Bernard Fleetwood-Walker (1893-1965), this thesis locates the artist in his social, political and economic context, arguing that his portraiture can be seen as an exemplar of modernity. The portraits are shown to be responses to modern life, revealed not in formally avant-garde depictions, but in the subject-matter. Industrial growth, the increasing population, expanding suburbs,
and a renewed interest in the outdoor life and popular entertainment are reflected in Fleetwood-Walker's artistic output. The role played by exhibition culture in the creation of the portraits is analysed: developing retail theory affected gallery design and exhibition layout and in turn impacted on the size, subject matter and style of Fleetwood-Walker's portraits. Emerging, and soon dominant, tabloid newspapers shaped content and language to attract readers, influencing the articulation of the reception of the artist's work. This thesis also makes a contribution to the regional perspective, demonstrating the temporary co-existence of multiple, heterogeneous, modern art worlds. Throughout the thesis the relevance of economic factors is emphasised, reappraising the Marxist theory of modern art and concluding that a more complex economic description is required to provide a sensitive and insightful analysis of art history.

Cooperation Between Argentina and Brazil—Paul A. Whitescarver 1997-12-01 The political climate between Argentina and Brazil has changed from one of conflict to one of cooperation. The purpose of this thesis is to explain cooperation between Argentina and Brazil. A single qualitative case study is used to test three competing hypotheses: (1) the transition to democracy by Argentina (1983) and Brazil (1985) promotes cooperation; (2) the external economic environment forces cooperation; and (3) both
the transition to democracy and the economic environment have forced cooperation between the two countries. The findings are that the global market and the need to compete in it is the driving force for cooperation between Argentina and Brazil, but it is evident that the transition to democracy by both countries played a role in the intensification of cooperation that began in 1985.
