Principles of Management Openstax 2022-03-25
Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well as behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters. Accounting Principles and Practice describes the principles and conventions which provide the structure of Accounting practice. Many of the questions are taken from the past examinations of the Royal Society of Arts, the Association of Certified and Corporate Accountants, the Society of Incorporated Accountants, and the Institute of Chartered Accountants. This book is divided into 19 chapters and begins with a brief introduction to the double entry system of accounting. Considerable chapters are devoted to the Accounting techniques concerning the management of different types of accounts, receipts, payments, and expenditures. Other chapters examine the validity of the principles involved and of the limitations of the conventions. This text is based upon the conviction that the oft-quoted distinction between theory and practice is disastrously misleading. It demonstrates that good theory and good practice are inseparable. This book will prove useful to accountants and accounting students.

Financial Management

Wilbur G. Lewellen

2000

This text represents a unique approach to introductory corporate finance. Although many
texts have embraced the theme of shareholder wealth maximization, this book thoroughly carries out this theme in a uniquely consistent and unified fashion. It establishes the notion that a discounted cash flow mode captures the market valuation process. It then applies this concept of valuation not only to the typical analysis of capital expenditure decisions and cost of capital, but also to working capital management, financial budgeting and planning, and international financing and investing decisions. Additionally, this text is further differentiated by superior, substantive, and systematic treatment of the investing and financing decisions of multinational firms as part of the core managerial process.
