The book addresses the ways of planning and designing complex production systems for Make-to-Order Products specific resources of a type, i.e., a certain machine or a single worker, the determination of the sequence operations are to be done and the resources that are to be assigned to tasks, etc. This book introduces a methodical approach and pragmatic concept for the planning and design of changeable factories that act in strategic alliances to supply the ever-changing needs of the market. In the first part, the change drivers are highlighted and underlying trends and factors are described. In the second part, the impacts on the planning and design methodology that is based on a synergetic interaction of process and space. The accompanying project management of the architectural and strategic aspects concerns the production facilities and systems on the factory levels work place, section, building and site under functional, organisational, learning concept in the field of didactics.
