

The Cadastral Map In The Service Of The State A History Of Property Mapping

The Cadastral Map in the Service of the State-Roger J. P. Kain 1992 Throughout history the control of land has been the basis of political power. Cadastral maps - cartographic records of property ownership - played an important role in the rise of modern Europe as tools for the consolidation and extension of land-based national power. The Cadastral Map in the Service of the State: A History of Properly Mapping, illustrated with 127 maps, traces the development and application of rural property mapping in Europe and European colonies from the Renaissance through the nineteenth century. The authors go beyond traditional cartographic research, approaching the maps as political instruments rather than as simple geographical or historical tools. The result is an unprecedented examination of the political and economic forces behind the production of maps and advances in cartography, demonstrating how the seemingly neutral science of cartography became a political instrument for national interests. Beginning with a review of the roots of cadastral mapping in the Roman Empire, the authors concentrate on the use of cadastral maps in the Netherlands, France, England, the Nordic countries, the German lands, the territories of the Austrian Habsburgs, and the European colonies. During the seventeenth century, governments began to use maps to secure economic and political bases; by the nineteenth century, these maps had become tools for aggressive governmental control of land as tax bases, natural resources, and national territories. The culmination of extensive bibliographic and archival research made possible by the authors' considerable linguistic skills, this work draws from source materials in ten languages and spanning five centuries. It will remain thedefinitive source on the subject for years to come. The Cadastral Map in the Service of the State was awarded the 1991 Kenneth Nebenzahl Prize for the best new manuscript in the history of cartography.

Cadastre: Geo-Information Innovations in Land Administration-Tahsin Yomralioglu 2017-03-15 This book highlights the latest improvements in cadastre with examples and case studies from various parts of the world. Authors from different continents, in association with national and international organizations and societies, present the most comprehensive forum to date for cadastre, offering a broad overview of land administration and contemporary perspectives on current research and developments, including surveying, land management, remote sensing and geo-information sciences. Cadastre is a universal concept and is defined as “the work of officially mapping and systemically registering the areas, borders and values of all kinds of land and property”. It is normally a parcel-based and up-to-date land information system containing a record of interests in land with rights, restrictions and responsibilities. It may be established for fiscal and legal purposes, to assist in management for better planning and other administrative purposes, and to enable sustainable development and environmental protection. As such, “cadastre” is an important public inventory documenting the records of ownership, bordering and responsibility regarding the land with “title deeds” to parcels and answering the questions of “whose land, where and how much”. The materials included in the book can support courses at universities and related training institutions worldwide, and will greatly improve readers' understanding of the scholarly fields involved in cadastre: land registration and management, surveying and mapping, and geo-information management, land governance, land taxation and public administration etc.

Proceedings of the 2nd International Conference on Building Innovations-Volodymyr Onyshchenko 2020-06-13 This book gathers the latest advances, innovations, and applications in the field of building design and construction, by focusing on new design solutions for buildings and new technologies creation for construction, as presented by researchers and engineers at the 2nd International Conference Building Innovations (ICBI), held in Poltava - Baku, Ukraine - Azerbaijan, on May 23-24, 2019. It covers highly diverse topics, including structures operation, repairing and thermal modernization in existing buildings and urban planning features, machines and mechanisms for construction, as well as efficient economy and energy conservation issues in construction. The contributions, which were selected by means of a rigorous international peer-review process, highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations.

Research and Development Progress in 3D Cadastral Systems-Efi Dimopoulou 2019-10-28 The increasing complexity of infrastructures and densely built-up areas requires a proper registration of the legal status (private and public), which can only be provided to a limited extent by the existing 2D cadastral registrations. The registration of the legal status in complex 3D situations is investigated under the header of 3D Cadastres. This publication, containing 13 selected contributions on 3D Cadastre, addresses the following areas: 1. 3D Cadastre operational experiences (analysis, LADM based, learning from each other, discovering gaps), 2. 3D Cadastre cost-effective workflow for new/updated 3D parcels = 4D (part of whole chain: From planning/design/permit in 3D, to registration/use in 3D), 3. 3D Cadastre web-based dissemination (usability, man-machine interfaces, including mobile/AR), 4. legal aspects for 3D Cadastre, best legal practices in various legislation systems, focus on large cities, including developing countries, 5. 3D data management, and 6. visualization, distribution, and delivery of 3D parcels.

Innovations in Land Rights Recognition, Administration, and Governance-Klaus W. Deininger 2010 Innovations in Land Rights Recognition, Administration, and Governance is part of the World Bank Studies series. These papers are published to communicate the results of the Bank’s ongoing research and to stimulate public discussion. The importance of good land governance to strengthen women’s land rights, facilitate landrelated investment, transfer land to better uses, use it as collateral, and allow effective decentralization through collection of property taxes has long been recognized. The breadth and depth of papers included in this volume, all of which were presented at the World Bank’s Annual Conference on Land Policy and Administration, illustrate the importance of good land governance and the benefits of collaboration among partners to act in a coordinated fashion to address the challenges posed by recent global developments. This volume hopes to increase awareness of and support to the successful implementation of innovative approaches that can help to not only improve land governance, but also contribute to the well-being of the poorest and the achievement of the Millennium Development Goals. World Bank Studies are available individually or on standing order. The World Bank Studies series is also available online through the World Bank e-library (www.worldbank.org/elibrary).

A History of Spaces-John Pickles 2012-11-12 This book provides an essential insight into the practices and ideas of maps and map-making. It draws on a wide range of social theorists, and theorists of maps and cartography, to show how maps and map-making have shaped the spaces in which we live. Going beyond the focus of traditional cartography, the book draws on examples of the use of maps from the sixteenth century to the present, including their role in projects of the national and colonial state, emergent capitalism and the planetary consciousness of the natural sciences. It also considers the use of maps for military purposes, maps that have coded modern conceptions of health, disease and social character, and maps of the transparent human body and the transparent earth.

Geospatial Technologies for Effective Land Governance-El-Ayachi, Moha 2018-10-12 Land, as a fundamental resource in regional development, provides major opportunities for farming, housing, urban planning, and financing. In order to meet the requirements of the new era, every state has developed and implemented a series of policies according to its national specificities and to the international regulations and trends. Geospatial Technologies for Effective Land Governance is a pivotal reference source that provides vital research on the application of the use of GNSS, remote sensing, and GIS. While highlighting topics such as crop management, multispectral images, and irrigation, this publication explores land administration, encompassing both cadastral systems and land registration, as well as the methods of land governance strategies. This book is ideally designed for researchers, agricultural professionals, engineers, environmentalists, land developers, educators, students, and policymakers seeking current research on land and land-based conflicts in urban and rural communities.
