Feline Philosophy-John Gray 2020-10-29 'Why can't a human be more like a cat? That is the question threaded through this vivid patchwork of philosophy, fiction, history and memoir ... a wonderful mixture of flippancy and profundity, astringency and tenderness, wit and lament' Jane O'Grady, Daily Telegraph 'When I play with my cat, how do I know she is not passing time with me rather than I with her?' Montaigne There is no real evidence that humans ever 'domesticated' cats. Rather, it seems that at some point cats saw the potential value to themselves of humans. John Gray's wonderful new book is an attempt to get to grips with the philosophical and moral issues around the uniquely strange relationship between ourselves and these remarkable animals.

Feline Philosophy draws on centuries of philosophy, from Montaigne to Schopenhauer, to explore the complex and intimate links that have defined how we react to and behave with this most unlikely 'pet'. At the heart of the book is a sense of gratitude towards cats as perhaps the species that more than any other - in the essential loneliness of our position in the world - gives us a sense of our own animal nature.

Cat Daddy-Jackson Galaxy 2012-05-10 Cat behaviorist and star of Animal Planet's hit television show My Cat from Hell, Jackson Galaxy, a.k.a. "Cat Daddy," isn't what you might expect for a cat expert (as The New York Times noted, with his goatee and tattoos, he "looks like a Hells Angel"). Yet Galaxy's ability to connect with even the most troubled felines -- not to mention the stressed-out humans living in their wake -- is awe-inspiring. In this book, Galaxy tells the poignant story of his thirteen-year relationship with a petite gray-and-white short-haired cat named Benny, and gives singular advice for living with, caring for, and loving the feline in your home. When Benny arrived in his life,

Galaxy was a down-and-out rock musician with not too much more going on than a part-time job at an animal shelter and a drug problem. Benny's previous owner brought the cat to the shelter in a cardboard box to give him up. Benny had seen better days --- his pelvis had just been shattered by the wheels of a car -- and his owner insisted he'd been "unbondable" from day one. Nothing could have been further from the truth. An inspiring account of two broken beings who fixed each other, Cat Daddy is laced throughout with Galaxy's amazing "Cat Mojo" advice for understanding what cats need most from us humans in order to live happier, healthier lives.

Cat Sense-John Bradshaw 2013-09-10 Cats have been popular household pets for thousands of years, and their numbers only continue to rise. Today there are three cats for every dog on the planet, and yet cats remain more mysterious, even to their most adoring owners. Unlike dogs, cats evolved as solitary hunters, and, while many have learned to live alongside humans and even feel affection for us, they still don't quite "get us" the way dogs do, and perhaps they never will. But cats have rich emotional lives that we need to respect and understand if they are to thrive in our company. In Cat Sense, renowned anthrozoologist John Bradshaw takes us further into the mind of the domestic cat than ever before, using cutting-edge scientific research to dispel the myths and explain the true nature of our feline friends. Tracing

the cat's evolution from lone predator to domesticated companion, Bradshaw shows that although cats and humans have been living together for at least eight thousand years, cats remain independent, predatory, and wary of contact with their own kind, qualities that often clash with our modern lifestyles. Cats still have three out of four paws firmly planted in the wild, and within only a few generations can easily revert back to the independent way of life that was the exclusive preserve of their predecessors some 10,000 years ago. Cats are astonishingly flexible, and given the right environment they can adapt to a life of domesticity with their owners—but to continue do so, they will increasingly need our help. If we're to live in harmony with our cats, Bradshaw explains, we first need to understand their inherited quirks: understanding their body language, keeping their environments—however small—sufficiently interesting, and becoming more proactive in managing both their natural hunting instincts and their relationships with other cats. A must-read for any cat lover, *Cat Sense* offers humane, penetrating insights about the domestic cat that challenge our most basic assumptions and promise to dramatically improve our pets' lives—and ours.

The Handbook for a Happy Cat-Liesbeth Puts 2021-11-30 Give your best friend more purr and pounce with this whiskers-to-tail guide to the good life! You'll learn: Why a bigger water bowl does away with "whisker stress" How to move like a mouse for maximum fun at playtime Skills to teach your kitten for a lifetime of easy vet visits, grooming, and more Subtle signs of stress such as excessive scent-marking and lip-licking How to tell frolic from fighting in the multi-cat household (and how to give frenemies a fresh start) What makes a scratching post so tempting that your

The Behavior of Communicating-William John Smith 1977 In this book, W. John Smith enlarges ethology's perspective on communication and takes it in new directions. Traditionally, ethological analysis has focused on the motivational states of displaying animals: What makes the bird sing, the cat lash its tail, the bee dance? The Behavior of Communicating emphasizes messages. It seeks to answer questions about the information shared by animals through their displays: What information is made available to a bird by its neighbor's song, to a cat by its opponent's gesture, to a bee by its hivemate's dancing? What information is extracted from sources contextual to these displays? How are the responses to displays adaptive for recipients and senders? What evolutionary processes and constraints underlie observed patterns of animal communication? Smith's approach is deeply rooted in the ethological tradition of naturalistic observations. Detailed analysis of observed displays and display repertoires illuminates the theoretical discussion that forms the core of the book. A taxonomy and interpretative analysis of messages made available through formalized display behavior are also developed. Smith shows that virtually all subhuman animal displays may be interpreted as transmitting messages about the communicator--not the environment--and, more specifically, that messages indicate the kinds of behavior the displaying animal may choose to perform. The most widespread behavioral messages are surprisingly general, even banal, in character; yet they make public information that is not readily available from other sources and that would otherwise be essentially private to the communicator. Taken along with information from sources contextual to the displays, the messages

made available may permit responses that are markedly specific. By taking advantage of contextual specificity, a species expands the capacity of its display behavior to be functional in numerous and diverse circumstances. After developing the concept of messages and discussing their forms, the responses made to them, and the functions engendered, Smith turns to the evolution of display behavior--the ways in which acts become specialized for communication and the nature of the evolutionary constraints affecting the ultimate forms of displays. He revises the traditional ethological concept of displays, and in a final chapter develops the further concept of formalized interactions. Here he extends the discussion to formal patterns of behavior that, unlike displays, are beyond the capabilities of individual performers.
