The Home Colours Sourcebook-Alice Buckley 2008 In nature, the effect of light can change a scene dramatically. The warm summer sun on an August evening tells a completely different story to that of the harsh light of a cool January morning. This unique reference guide shows how and why even the subtlest colours can evoke a certain mood or feeling. Get enthused by the emotion of colour and learn how to combine and contrast different tones and hues of the neutral spectrum. Create tranquil bedrooms, spacious living areas and light and airy kitchens with this definite guide for using and combining colours in the neutral palette. Page after page of colour schemes show how subtle changes can make a difference to the overall feel, look and ambience of a space or existing colour scheme. Neutrals are one of the easiest groups of colours to use and work with. They all go together and can be layered mixed and matched. But in The Neutrals Collection the author examines in depth the huge array of neutral colours and combinations available. Alice Buckley studied Textile Design in Manchester where she began working as a textile designer. Her designs have been exhibited and sold throughout Europe and the USA. She now runs a successful interior design practice and is a regular contributor to magazines and other media. Alice lives in Cheshire.

Pure Colour-Jane Cumberbatch 2015-04-02 In this sumptuous new book from stylist Jane Cumberbatch, we give you the Pure Style philosophy on colour. Decorating a room is like painting a picture. There is nothing more pleasurable than starting with a blank canvas and filling your home with the colours and textures that you find most pleasing. The book is divided into five colour palettes: blues, greens, yellows, pinks and whites. The garden, the sea and the landscape are our colour charts and provide a veritable paintbox of inspiration. From the bean greens of the vegetable patch to the eau de nil wash of a calm evening tide, images are stored as snapshots. The first pink rosebud on a May morning is as perfect a shade for a wallpaper border as it is a cue for a lipstick colour or fabric for a long swirly summer skirt. So whether you are looking to transform your whole house, or simply for a few quick and easy ideas to brighten up a neglected corner, you are sure to find inspiration within these pages. Jane's own notes and musings accompany stunning, evocative photographs. There are practical examples throughout, whether you prefer to experiment with adding small splashes of contrasting colour to bring life to a room, or try a softer, more harmonious scheme. The book is packed full of everyday ideas to enable you to furnish your home with freshness and simplicity.

How People Learn-National Research Council 2000-08-11 First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education. For greatest color accuracy, the entire book is printed in six colors rather than the usual four. All swatches are identified with manufacturers' numbers, and a complete list of suppliers rounds out this beautiful, indispensable reference book.
