The Constellations-Lloyd Motz 1991-01-01

The Constellations-Lloyd Motz 1988 Describes the history, mythology, scientific aspects, and important stars of each constellation from Andromeda to Virgo

Compendium of Practical Astronomy-Günter D. Roth 2012-12-06 It is a pleasure to present this work, which has been well received in German-speaking countries through four editions, to the English-speaking reader. We feel that this is a unique publication in that it contains valuable material that cannot easily-if at all-be found elsewhere. We are grateful to the authors for reading through the English version of the text, and for responding promptly (for the most part) to our queries. Several authors have supplied us, on their own initiative or at our suggestion, with revised and updated manuscripts and with supplementary English references. We have striven to achieve a translation of Handbuch for Sternfreunde which accurately presents the qualitative and quantitative scientific principles contained within each chapter while maintaining the flavor of the original German text. Where appropriate, we have inserted footnotes to clarify material which may have a different meaning and/or application in English-speaking countries from that in Germany. When the first English edition of this work, Astronomy: A Handbook (translated by the late A. Beer), appeared in 1975, it contained 21 chapters. This new edition is over twice the length and contains 28 authored chapters in three volumes. At Springer's request, we have devised a new title, Compendium of Practical Astronomy, to more accurately reflect the broad spectrum of topics and the vast body of information contained within these pages.

Constellations-Giles Sparrow 2013-10-25 Constellations is a guide to the night sky that focuses on these 88 distinctive patterns, revealing their often intriguing stories—their origins, mythology, present-day significance, and the multitude of wondrous objects they contain. Complete with over 300 of the best astronomical images ever captured, a comprehensive introduction to the stars and other celestial phenomena, and a series of newly commissioned, state-of-the-art maps showing the stars that are visible from populated latitudes in both hemispheres throughout the year, this magnificent guide has all you need to know to become an expert stargazer. Step outside on a clear night, and the number of stars in the night sky can be overwhelming. Take a pair of binoculars or a small telescope with you, and a celestial vista of star clusters and clouds, knots of gas and dust, nearby planets and distant galaxies is revealed. Since ancient times, stargazers have made sense of the night sky by grouping its stars into constellations—star patterns that often have symbolic or mythological meanings.

Seeing in the Dark-Timothy Ferris 2012-12-18 In Seeing in the Dark, a poetic love letter to science and to the skies, Timothy Ferris invites us all to become stargazers. He recounts his own experiences as an enthralled lifelong amateur astronomer and reports from around the globe -- from England and Italy to the Florida Keys and the Chilean Andes -- on the revolution that's putting millions in touch with the night sky. In addition, Ferris offers an authoritative and engaging report on what's out there to be seen -- what Saturn, the Ring nebula, the Silver Coin galaxy, and the Virgo supercluster really are and how to find them. The appendix includes star charts, observing lists, and a guide on how to get involved in astronomy. Ferris takes us inside a major revolution sweeping astronomy, as lone amateur astronomers, in global networks linked by the Internet, make important discoveries that are the envy of the professionals. His ability to describe the wonders of the universe is simply magical, and his enthusiasm for his subject is irresistible.

Star-Hopping-Robert A. Garfinkle 1997-04-13 Learn all about the starry skies and ancient myths through the star-hopping technique.

Deep-Sky Companions: The Caldwell Objects-Stephen James O'Meara 2002 A complete observers guide to the Caldwell Objects.

A multiverses of YOU and I-Mehnaaz Chhetri

Deep-Sky Companions: Hidden Treasures-Stephen James O'Meara 2007-04-12 Stephen O'Meara's new and exciting observing guide spotlights an original selection of 109 deep-sky objects that will appeal to sky-watchers worldwide. His 'hidden treasures' include a wonderful assortment of galaxies, open clusters, planetary nebulae and more, all of which have been carefully chosen based on their popularity and ease of observing. None of these objects are included in either the Messier or the Caldwell catalogs, and all are visible in a 4-inch telescope under dark skies. Stunning photographs and beautiful drawings accompany detailed visual descriptions of the objects, which include their rich histories and astrophysical significance. The author's original finder charts are designed to help observers get to their targets fast and efficiently.

Spitfire Revisited-Trevor Sowden 2011 A book to assist the Spitfire/Seafire modeler to complete any of the production Marks, from Mk.I to FR.47, with its appropriate components and in any number of suggested color schemes. This book also includes a concise history of the type - from the first to the last.

Cosmic Entity-Mark A. Strain 2004-01 Sometime in the distant past, some fourteen billion years ago, all that is and all that was burst into creation in a tumultuous event. Time and space had no meaning before this genesis event that sparked creation. Cosmic Entity describes how space and time-the universe-came from nothing-a perfect balance of positive and negative energy. All matter that exists today, from the rings of Saturn to the dirt beneath your feet, was created from the seething fireball when the infant universe was less than one second old. This raw material existed in the form of protons (or hydrogen). Cosmic Entity explains how the elements were formed, how matter is synthesized within the cores of stars, and how supernovae (exploding stars) serve to create even heavier elements and seed the galaxies with this raw material. A billion or so years after creation, give or take an eon, the universe expanded and cooled enough for interesting structures-beautiful spiral and elliptical islands of stars called galaxies-to form from the sea of matter. Galaxies grouped together into clusters and colossal super cluster walls of galaxies evident today.

Observing Variable Stars-David H. Levy 1998-04-16 Aimed at the enthusiast, this book gives a thorough account of all aspects of variable star observation.

Walford's Guide to Reference Material: Science and technology-Albert John Walford 1993 Cette bibliographie commentée touche tous les domaines du savoir humain, soit de l'Art à la Zoologie; elle signale les ouvrages les plus importants soit des bibliographies, des index, des encyclopédies, des dictionnaires, des guides, des revues etc dont le support d'information est soit du papier, soit un cd-rom, soit une base de données en ligne directe, soit un microforme ect. See the Stars-Ken Crowell 2000 Presents black holes, star colors, the lifecycle of a star, and other star concepts, including a different constellation to look at for each month of the year.

The Friendly Guide to the Universe-Nancy Hathaway 1995 An accessible compendium of information on the cosmos features a time-line history of the universe, explanations of key astronomical concepts, explorations of the heavenly bodies, and notes on the works of Copernicus, Galileo, and Newton  
BMC 1100 and 1300-James Taylor 2015-11-15 The British Motor Corporation's 1100 and 1300 model range was amongst the most successful in the Corporation's history, selling more than 2.1 million of all types between its introduction in 1962 and its demise in 1974. World-wide, it was sold under eight different marque names and in two-door saloon, four-door saloon, two-door estate, and five-door hatchback forms - and very nearly as a van as

well. In Britain, it was the country's best-selling car between 1962 and 1971, being beaten just once (in 1967) by the Ford Cortina. BMC 1100 and 1300 looks at the design and development of a model range that at the time confirmed BMC as a pioneer of new automotive ideas and had a profound impact on other manufacturers. It covers not only the full standard model range, but special conversions, cars built abroad, and owning and running the cars today.

Each cluster of stars is featured alongside the "story" (mythological or historical) behind its naming, tips on how to find it, what times of year it is visible, and key stars and asterisms within its grouping. Complete with star maps and a glossary, this keepsake volume of visual reference and beauty is perfect for inquisitive young stargazers. Colors are brighter than they appear - printed in pure Pantones. Book jacket features foil stamping and laser-cut pinholes. Ages 7-10

Exploration of the Universe-George Ogden Abell 1991

Night Sky Watcher-Raman Prinja 2016-07-01 Get ready to explore the magical night sky. Find out everything there is to know about what you can spot in the sky, such as how explorers used constellations as a form of navigation. Also discover when is the best time to spot comets and why the Moon's appearance has changed over time. Night Sky Watcher includes everything from the Sun to the Moon, to the stars and planets. Symbols are used within the book to show what can be seen in the northern and southern hemispheres. This allows the reader to view exactly what they can see in the sky, regardless of their location.

The Audubon Society Field Guide to the Night Sky-Mark R. Chartrand 1991 Field guide to the night sky with information on individual stars, constellations, galaxies, planets, and the moon.

Touring the Universe through Binoculars-Philip S. Harrington 1990-10-18 This comprehensive work takes you on a personal tour of the universe using nothing more than a pair of binoculars. More comprehensive than any book currently available, it starts with Earth's nearest neighbor, the moon, and then goes on to explore each planet in the solar system, asteroids, meteors, comets and the sun. Following this, the reader is whisked away into deep space to explore celestial bodies including stars that are known and many sights less familiar. The final chapter includes a detailed atlas of deep-sky objects visible through binoculars. The appendices include guidance on how to buy, care for and maintain astronomical binoculars, tips and hints on using them, and detailed information on several home-made binocular mounts.

Land Between the Lakes Recreation Guide-Johnny Molloy 2011-01-15 Land Between The Lakes Outdoor Recreation Handbook is the only comprehensive guide to the Land Between The Lakes National Recreation Area. The handbook is divided into two sections--;water activities and land activities. The water section guides visitors to important fishing spots and lakes, as well as outlines one of the longest paddle trails in the Midwest--;the 85-mile-long Land Between The Lakes Paddle route. Descriptions of all lake accesses as well as swimming beaches are also included. The land section offers detailed descriptions to more than 200 miles of hiking trails (including the 60-mile long North-South Trail). Finally, the Land Between The Lakes Outdoor Recreation Handbook offers an extensive reference section, detailing alternate lodging possibilities, outfitters, and conveniences located in nearby towns.

The Monthly Sky Guide; 10th Edition-Ian Ridpath 2019-07-17 Classic, user-friendly guide for all ages describes stars, Moon, constellations, more. Newly updated to identify planet positions and eclipses. Most phenomena visible to the naked eye; all within reach of binoculars or small telescope.

The Monthly Sky Guide-Ian Ridpath 2003-05-28 Now in full colour throughout, the sixth edition of Ian Ridpath and Wil Tirion's famous guide to the night sky is fully revised and updated for planet positions and forthcoming eclipses up to the end of the year 2007. With one chapter for each month of the year, this easy-to-use handbook is an ideal first guide to the sky. It will help the reader to identify constellations, star clusters, nebulae, galaxies and meteor showers, to plot the movement of planets, or to witness solar and lunar eclipses. Most of the features discussed are visible to the naked eye and all can be seen with a small telescope or binoculars. The Monthly Sky Guide offers a clear and simple introduction to the skies of the northern hemisphere for beginners of all ages.

Sky Gazing-Meg Thacher 2020-10-27 The sun, moon, stars, and planets have been a source of wonder for as long as humans have lived on earth. In this highly visual guide to observing the sky with the naked eye, kids aged 9-14 will delve into the science behind what they see. This captivating book offers a tour of our solar system and deep space, explaining how objects like Earth's moon were formed and introducing the "why" behind phenomena such as eclipses, northern lights, and meteor showers. Sky gazers will learn how to find and observe planets — no binoculars or telescopes required — and star charts will show them how to spot constellations through the seasons and in both hemispheres. Activities include tracking the cycles of the sun and moon and observing the sky during daylight hours or on a cloudy night. Includes profiles of professional astronomers and sidebars on space technology and current issues, such as light pollution. This publication conforms to the EPUB Accessibility specification at WCAG 2.0 Level AA.
