Reality Therapy-Robert E. Wubbolding 2011 In Reality Therapy, Robert E. Wubbolding explores the history, theory, research, and practice of this choice-focused approach to psychotherapy. William Glasser first developed the ideas behind reality therapy in the 1950s and 1960s when he formulated the basis of choice theory, which concerns the way human beings choose their own behavior and how these choices can either satisfy or not satisfy basic drives and goals. Using this theoretical basis, reality therapy helps clients to learn to be more aware of their choices and how these choices may be inefficient in achieving their goals. Framing behavior as a choice, a choice made by client's internal control, leads clients to feel more responsible and in command of their lives. Reality Therapy is structured around the WDEP system (wants, doing, evaluation, and planning): The reality therapist works with clients to explore their wants and what they are doing to achieve those wants, evaluating whether what they are doing is helpful or harmful to their goals, and finally helping the client plan ways to change their behavior. In this book, Wubbolding presents and explores this approach, its theory, history, therapy process, primary change mechanisms, the empirical basis for its effectiveness, and contemporary and future developments. This essential primer, amply illustrated with case examples featuring diverse clients, is perfect for graduate students studying theories of therapy and counseling, as well as for seasoned practitioners interested in understanding how this approach has evolved and how it might be used in their practice.

Striving for the Whole-Rainer Diriwachter 2011-12-31 This unusual collection explores the development of ideas in psychology's past, and shapes them into a valuable resource for ideas in the discipline's future, with particular emphasis on holistic traditions in psychology. Diriwöchter and Valsiner focus on developmental holistic psychology as advocated by the second school of Leipzig in Germany. Although largely neglected, this school of thought has provided some of the fundamental ideas necessary for a truly holistic approach in psychology. This volume includes Leibniz's dynamic holism and Ehrenfels' discussion about Gestalt qualities, which has generally been acknowledged as a major milestone in the formation of Gestalt psychology. Each chapter looks at the possible future of holistic psychology. Striving for the Whole contains several well-though out discussions on possible elaborations of holistic psychology by contrasting it with Ernst Boesch's cultural psychology, Pierre Janet's theory on emotions, and Jan Smuts holistic approach to personality theory. Discussions of holistic approaches in biology and evolutionary psychology, as well as a renewed look at Lloyd Morgan's comparative methodology, complete the volume. Striving for the Whole has been written by an international group of authors and will be of interest to students of the social sciences and intellectual history, and anyone who wants to dive deeper into holistic approaches that maintain their ties with empirical methodology. It is ideal for graduate and upper-level undergraduate courses in psychology.

The second chapter provides a detailed classification of operator-machine system models: technocentric, anthropocentric, and operator-machine interface. In the third chapter, the author focuses on psychological characteristics of the operator-machine-interface system based on the example of jet plane pilot's activity. The fourth chapter focuses on learning new operator activities and training of operator's action in comprehensive simulators as analogues of work experience. In the fifth chapter the author examines occupational safety and reliability of the operator-machine system.
