都市發展-Lewis D. Hopkins 2005

房地产开发-Mike E. Miles 2003

Planning in the USA-J. B. Cullingworth 2009 This revised edition
continues to provide a comprehensive introduction to the policies
and practices of planning. Discussing land use, urban planning
and environmental protection policies, the text explains the
nature of the planning process.

Dead End-Benjamin Ross 2015-12-14 More than five decades
have passed since Jane Jacobs wrote her classic The Death and
Life of Great American Cities, and since a front page headline in
the New York Times read, "Cars Choking Cities as 'Urban Sprawl'
Takes Over." Yet sprawl persists, and not by mistake. It happens
for a reason. As an activist and a scholar, Benjamin Ross is
uniquely placed to diagnose why this is so. Dead End traces how
the ideal of a safe, green, orderly retreat where hardworking
members of the middle class could raise their children away from
the city mutated into the McMansion and strip mall-ridden
suburbs of today. Ross finds that sprawl is much more than bad
architecture and sloppy planning. Its roots are historical,
sociological, and economic. He uses these insights to lay out a
practical strategy for change, honed by his experience leading the
largest grass-roots mass transit advocacy organization in the
United States. The problems of smart growth, sustainability,
transportation, and affordable housing, he argues, are
The two keys to creating better places to live are expansion of rail transit and a more genuinely democratic oversight of land use. Dead End is, ultimately, about the places where we live our lives. Both an engaging history of suburbia and an invaluable guide for today's urbanist, it will serve as a primer for anyone interested in how Americans actually live.

A Richer Heritage—Robert E. Stipe 2003 Surveying the past, present and future of historic preservation in America, this text features 15 essays by some of the most eminent voices in the field, essays which highlight the principle ideas and events that have shaped and continue to shape the movement.

Remaking American Communities—David C. Soule 2007-11-01
Urban sprawl has gained much national attention in recent years. Sprawl involves not only land-use issues but also legal, political, and social concerns. It affects our schools, the environment, and race relations. Comprehensive enough for high school students and also appropriate for college undergraduates, Remaking American Communities delves into the challenges of urban sprawl by turning to some of America's top thinkers on the problem, including Robert Yaro, president of the Regional Plan Association. Other cutting-edge essays include a foreword about the emergence of sprawl by nationally syndicated columnist Neal Peirce, views about race and class by former mayor of Albuquerque David Rusk, and a discussion of transportation dynamics by Curtis Johnson, president of the Citistates Group. The essays in this collection explore the core issues of sprawl and the agenda for dealing with it. Complete with a glossary, resources, and contact information for smart-growth alliances, this book is extremely user-friendly. David C. Soule offers an unbiased viewpoint of this national phenomenon in a way that will be accessible to students and those with little background in the issue.

Land Use Controls—Robert C. Ellickson 2020-10-15 Land Use Controls
Controls: Cases and Materials emphasizes an interdisciplinary approach that weaves historical, social, and economic causes and effects of legal doctrine. The casebook also brings out the functional relationships between formally unrelated routes of law—statutes, ordinances, constitutional doctrines, and common law—by focusing on their practical deployment, developers, neighbors, planners, politicians, and their empirical effects on outcomes like neighborhood quality, housing supply, racial segregation, and tax burdens. A thematic framework illuminates the connections among multiple topics under land law and gives attention to the factual and political context of the cases and aftermath of decisions. Dynamic pedagogy features original introductory text, cases, notes, excerpts from law review articles, and visual aids (maps, charts, graphs) throughout. New to the Fifth Edition: A focus on affordability and the new conflicts over urban zoning A fully updated treatment of local administrative law Recent constitutional rulings, including up-to-date Supreme Court decisions on exactions and regulatory takings Thoroughly updated notes, with recent cases, law review literature, and empirical studies Professors and students will benefit from: Distinguished authorship by respected scholars and professors with a range of expertise An interdisciplinary approach combining historical, social, political, and economic perspectives and offering dynamic opportunities for analysis along with broad legal coverage Concise but comprehensive treatment of the legal issues in private and public regulation of land development, including environmental justice, building codes and subdivision regulations, and the federal role in urban development A thematic framework illuminating connections among multiple discrete topics under land law and the factual and political context of cases and aftermath of decisions Excellent coverage and dynamic pedagogy The Western Range Revisited-Debra L. Donahue 1999 Livestock grazing is the most widespread commercial use of federal public lands. The image of a herd grazing on Bureau of Land
Management or U.S. Forest Service lands is so traditional that many view this use as central to the history and culture of the West. Yet the grazing program costs far more to administer than it generates in revenues, and grazing affects all other uses of public lands, causing potentially irreversible damage to native wildlife and vegetation. The Western Range Revisited proposes a landscape-level strategy for conserving native biological diversity on federal rangelands, a strategy based chiefly on removing livestock from large tracts of arid BLM lands in ten western states: Arizona, California, Colorado, Idaho, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming. Drawing from range ecology, conservation biology, law, and economics, Debra L. Donahue examines the history of federal grazing policy and the current debate on federal multiple-use, sustained-yield policies and changing priorities for our public lands. Donahue, a lawyer and wildlife biologist, uses existing laws and regulations, historical documents, economic statistics, and current scientific thinking to make a strong case for a land-management strategy that has been, until now, "unthinkable." A groundbreaking interdisciplinary work, The Western Range Revisited demonstrates that conserving biodiversity by eliminating or reducing livestock grazing makes economic sense, is ecologically expedient, and can be achieved under current law.

Planning for Tall Buildings-Michael J. Short 2012-11-12 In a time of recession, the challenge of building and planning for tall buildings has become even more complex; the economics of development, legislative and planning frameworks, and the local politics of development must be navigated by those wishing to design and construct new tall buildings which fit within the fabric of their host cities. This book is a timely contribution to the debate about new tall buildings and their role and effect on our cities. It is divided into two main parts. In part one, the relationship between tall buildings and planning is outlined, followed by an exploration of the impacts that construction of tall
buildings can have. It focuses, in particular, on the conservation debates that proposals for new tall buildings raise. The first part ends with an analysis of the way in which planning strategies have evolved to deal with the unique consequences of tall buildings on their urban locations. The second part of the book focuses on seven examples of medium-sized cities dealing with planning and conservation issues, and implications that arise from tall buildings. These have been chosen to reflect a wide range of methods to either encourage or to control tall buildings that cities are deploying. The case studies come from across the western world, covering England (Manchester, Liverpool, Newcastle and Birmingham), Norway (Oslo), Ireland (Dublin) and Canada (Vancouver) and represent a broad spectrum of approaches to dealing with this issue. In drawing together the experiences of these varied cities, the book contributes to the ongoing debate about the role of the tall building in our cities, their potential impacts, and experiences of those who use and inhabit them. The conclusions outline how cities should approach the strategic planning of tall buildings, as well as how they should deal with the consequences of individual buildings, particularly on the built heritage.

Running City Hall - David L. Martin 1990
Examines political realities in municipal management Running City Hall studies the history and growth of American cities, their legal status, relationships with other governments, city politics, and financing. From the impact of AIDS to performance zoning, the second edition covers such vital topics as electoral systems, administration, municipal unionism, public safety, social services, and planning. Balanced and thorough, this readable and timely work will be welcomed by practitioners, students, and everyone who seeks to understand the American city.

The No-growth Imperative - Gabor Zovanyi 2013
Mounting evidence reveals that the existing scale of human enterprise has already surpassed global ecological limits to growth. This
ecological reality clearly counteracts the possibility of continued exponential growth in the twenty-first century. In the absence of international, national, or state initiatives to implement a no-growth imperative founded on ecological limits, this book takes the position that local communities have an obligation to take the lead in promoting a new politics of sustainability directed at recognizing and...

House Divided-Alex Bozikovic 2019-06-25 Housing is increasingly unattainable in successful global cities, and Toronto is no exception -- in part because of zoning that protects “stable” residential neighborhoods with high property values. House Divided is a citizen’s guide for changing the way housing can work in big cities. Using Toronto as a case study, this anthology unpacks the affordability crisis and offers innovative ideas for creating housing for all ages and demographic groups. With charts, maps, data, and policy prescriptions, House Divided poses tough questions about the issue that will make or break the global city of the future.

Regulatory Takings-William A. Fischel 1995 State and federal government regulations are disciplined by property-owner coalitions whose "voice" is clearly audible in the statehouses and in Congress.

Land in the American West-William G. Robbins 2011-12-01 Throughout the history of the United States, the concepts of ♦land♦ and ♦the West♦ have fired the American imagination and fueled controversy. The essays in Land in the American West deal with complex, troublesome, and interrelated questions regarding land: Who owns it? Who has access to it? What happens when private rights infringe upon the public good, or when one ethnic group is pitted against another, or when there is a conflict between economic and environmental values? Many of these questions have deep historical roots. They all have special significance in the modern American West, where natural resources are still abundant and large areas of land are federally
owned.
Property Rights and the Constitution-Dennis J. Coyle 1993-07-01
A discussion of current trends in the constitutional protection of economic liberties. Other topics dealt with include the current trends in (and relevance of) constitutional law for welfare rights, labor unions, and labor law. Recent Supreme Court decisions on property rights also receive much attention. --From publisher description.
Conflict Resolution - Volume II-Keith William Hipel 2009-11-10
Conflict Resolution is a component of Encyclopedia of Institutional and Infrastructural Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. The Theme on Conflict Resolution deals with conflict which is an integral component in the utilization and management of all life support systems. These volumes give a comprehensive review on Conflict Domains: Warfare, Internal Conflicts, and the Search for Negotiated or Mediated Resolutions; Analysis methods of conflict and its resolution; Approaches to Conflict Resolution; Formal Models for Conflict Resolution and Case Studies. These two volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.
Urban Development-Lewis D. Hopkins 2001-06 With increased awareness of the role of plans in shaping urban and suburban landscapes has come increased criticism of planners and the planning profession. Developers, politicians, and citizens alike blame "poor planning" for a host of community ills. But what are plans really supposed to do? How do they work? What problems can they successfully address, and what is beyond their scope? In Urban Development, leading planning scholar Lewis Hopkins tackles these thorny issues as he explains the logic of plans for urban development and justifies prescriptions about when and
how to make them. He explores the concepts behind plans, some that are widely accepted but seldom examined, and others that modify conventional wisdom about the use and usefulness of plans. The book places the role of plans and planners within the complex system of urban development offers examples from the history of plans and planning discusses when plans should be made (and when they should not be made) gives a realistic idea of what can be expected from plans examines ways of gauging the success or failure of plans The author supports his explanations with graphics, case examples, and hypothetical illustrations that enliven, clarify, and make concrete the discussions of how decisions about plans are and should be made. Urban Development will give all those involved with planning human settlements a more thorough understanding of why and how plans are made, enabling them to make better choices about using and making plans. It is an important contribution that will be essential for students and faculty in planning theory, land use planning, and planning project courses.

The Closing of the Metropolitan Frontier- The period from the mid-1960s to the early 1980s signaled the end of the prosperity of the postwar years enjoyed by the cities of the prairie-those cities located immediately within or adjacent to the Mississippi River drainage system, or what is usually called the American Heartland. During this period, the bottom dropped out of local economies and all collapsed except those upheld by massive state institutions. With this collapse, optimism for new opportunities ended, signaling the close of the American frontier. The Closing of the Metropolitan Frontier looks at mid-sized cities Champaign-Urbana, Decatur, Joliet, Moline, Peoria, Rockford, Rock Island, and Springfield, Illinois; Davenport, Iowa; Duluth, Minnesota; and Pueblo, Colorado. Elazar examines how they adapted to change during the period immediately after World War II, through the Vietnam War, and the Nixon years. He considers the roles of federal and state governments as instruments of change including
their efforts to impose new standards and ways of doing business. The Closing of the Metropolitan Frontier analyzes the struggle between federalism and managerialism in the local political arena. In his new introduction, Daniel J. Elazar discusses this volume's place as part of a forty-year study of the cities of the prairie as well as the changes and developments in that region over that forty-year span. This volume will be of great interest to economists, political scientists, and sociologists interested in the Great Society and the New Federalism and their aftermath.

Daniel J. Elazar (1934-1999) was president of the Jerusalem Center for Public Affairs, and professor of political science and director of the Center for the Study of Federalism at Temple University. He authored many books including the four-volume series The Covenant Tradition in Politics, available from Transaction. Rozann Rothman is director of the applied politics program at Indiana University-Purdue University in Indianapolis. Stephen L. Schecter and Maura Allan Stein are associate professors of political science at Russell Sage College. Joseph Zikmund II is dean of the School of Letters and Sciences at Menlo College.

A New Jersey Anthology-Maxine N. Lurie 2010 This anthology contains seventeen essays covering eighteenth-century agrarian unrest, the Revolutionary War, politics in the Jackson era, feminism and the women's movements, slavery from the seventeenth to the nineteenth centuries, strikes and labor struggles, land use and regional planning issues, Blacks in Newark, the current political state of New Jersey, and more. The contributors are Michal R. Belknap, Lynn W. Dorsett, Gregory Evans Dowd, Charles E. Funnell, Steve Golin, Maxine N. Lurie, Richard P. McCormick, Gary Mitchell, Simeon F. Moss, Marie Marmo Mullaney, Mary R. Murrin, Gerald M. Pomper, Clement A. Price, Thomas L. Purvis, Daniel Schaffer, Warren E. Stickle III, Maurice Tandler.

Explorations in Planning Theory-Seymour J. Mandelbaum What is
this thing called planning? What is its domain? What do planners do? How do they talk? What are the limits and possibilities for planning imposed by power, politics, knowledge, technology, interpretation, ethics, and institutional design? In this comprehensive volume, the foremost voices in planning explore the foundational ideas and issues of the profession. Explorations in Planning Theory is an extended inquiry into the practice of the profession. As such, it is a landmark text that defines the field for today's planners and the next generation. As Seymour J. Mandelbaum notes in the introduction, "the shared framework of these essays captures a pervasive interest in the behavior, values, character, and experience of professional planners at work." All of the chapters in this volume are written to address arguments that are important in the community of planning theoreticians and are crafted in the language of that community. While many of the contributors included here differ in their styles, the editors note that students, experienced practitioners, and scholars of city and regional planning will find this work illuminating and helpful in their research.

Innovative Governments-Douglas J. Watson 1997 This study explores innovative and alternative means that local governments are using to cope with increases in federal and state mandates, some of which are unfunded.

21st Century Geography-Joseph P. Stoltman 2011-10-20 This is a theoretical and practical guide on how to undertake and navigate advanced research in the arts, humanities and social sciences.

Designing a Place Called Home-James Wentling 2012-12-06 are often lined with garages in front of houses that are clearly more internalized in design, some even taking on a fortress-like appearance. Today's new homes are technically superior in construction; i.e., they are more energy efficient, weather resistant and maintenance free. However, they also seem to lack the warmth and charm of prewar homes, for which more construction dollars were spent on quality veneers, buUt-in
features and other human-scale details. The postwar need for massive amounts of "affordable" housing for returning GIs helped to encourage building practices that could reduce on-site labor and material costs in houses. The accommodation of the automobile, cost-cutting movements and a variety of other trends caused a gradual decline in the human, social and emotional qualities of postwar residential architecture. This book will attempt to look at the issues and choices facing today's residential designers and home builders and ask: How can we make our new houses and neighborhoods more responsive to humanistic needs, particularly in light of constant pressures to keep housing costs down? This question will generally be addressed by comparing historical designs to those of today, to see if we might be able to reconsider some "old-fashioned" ideas in new housing designs.

Local Economic Development in the 21st Century: Quality of Life and Sustainability-Daphne T Greenwood 2014-12-18 Provides a comprehensive look at local economic development and public policy, placing special emphasis on quality of life and sustainability. It draws extensively on case studies, and includes both mainstream and alternative perspectives in dealing with economic growth and development issues. The contributions of economic theories and empirical research to the policy debates, and the relationship of both to quality of life and sustainability are explored and clarified.

Managing Community Growth-Eric D. Kelly 2004 Evaluates growth management as a land-use planning tool, considering under what circumstances it is most useful.

How to Save a River-David M Bolling 1994-06 How to Save a River presents in a concise and readable format the wisdom gained from years of river protection campaigns across the United States. The book begins by defining general principles of action, including getting organized, planning a campaign, building public support, and putting a plan into action. It then
provides detailed explanations of how to: form an organization and raise money develop coalitions with other groups plan a campaign and build public support cultivate the media and other powerful allies develop credible alternatives to damaging projects How to Save a River provides an important overview of the resource issues involved in river protection, and suggests sources for further investigation. Countless examples of successful river protection campaigns prove that ordinary citizens do have the power to create change when they know how to organize themselves.

Managing Community Growth-United States 1994
1974 Annual Supplement-Joan Schmitz Bergholt 2013-12-21
Research Handbook on Community Development-Rhonda Phillips 2020-04-24 This timely Research Handbook offers new ways in which to navigate the diverse terrain of community development research. Chapters unpack the foundations and history of community development research and also look to its future, exploring innovative frameworks for conceptualizing community development. Comprehensive and unequivocally progressive, this is key reading for social and public policy researchers in need of an understanding of the current trends in community development research, as well as practitioners and policymakers working on urban, rural and regional development.

Handbook of Urban Studies-Ronan Paddison 2001 The Handbook of Urban Studies provides the first comprehensive, up-to-date account of the urban condition, relevant to a wide readership from academics to researchers and policymakers. It provides a theoretically and empirically informed account embracing all the different disciplines contributing to urban studies. Leading authors identify key issues and questions and future trends for further research and present their findings so that, where appropriate, they are relevant to the needs of policymakers. Using the city as a unifying structure, the Handbook provides an holistic appreciation of urban structure and change, and of the
theories by which we understand the structure, development and changing character

Collaborative Land Use Management-Robert J. Mason 2008

Collaborative Land-Use Management: The Quieter Revolution in Place-Based Planning discusses the less-regulatory approaches to land-use management that have emerged over the past 35 years, analyzing the collective value of such place-based planning approaches as land trusts, open-space ballot measures, watershed conservancies, ecoregional plans, and smart-growth initiatives. Collaborative Land-Use Management appraises these trends from physical, social, economic, civic, and environmental justice perspectives.

Planning by Consent-Philip Booth 2003-09-02 **Please note this is an unedited paperback reprint of the hardback, originally published in 2003** The British system of universal development control celebrated its 50th anniversary in 1997. Remarkably, the system has survived more or less intact but the experience of the 1980s has left large questions unanswered about the relevance and effectiveness of the system. This book traces the history of the development control system in Britain from early modern times to the present day.

Fight City Hall and Win-Connor Murphy 2017-12-07 How often have you seen a development built that no one wanted or needed - - ruining the neighborhood, harming the landscape, and wrecking property values -- despite grumbling and protests by the neighbors, and sometimes without anyone even knowing it was going to happen until it was too late? All across America, bad development is approved because ordinary people don't have the knowledge they need to stand up and fight back. At any time, you can get a public notice telling you a notorious real estate developer has applied for a permit to build nearby. Will you know how to respond? Will you know what steps to take to protect your rights? Fight City Hall and Win gives ordinary folks the insider knowledge they need to protect their neighborhoods. It is filled
with humor, irony, and true-to-life bedtime stories that teach readers how to take on the good old boys at city hall -- and win. Contested Lands-Robert J. Mason 1992 The nation's first and only "national reserve," the Pinelands of New Jersey is located in the middle of the densely populated urban corridor between New York City and Philadelphia. Possessing vast quantities of pure groundwater, distinct flora and fauna, and a fascinating history of human occupancy and resource exploitation, the Pine Barrens is managed by a 15-member commission appointed at the federal, state, and local level. In his discussion of the implementation of the Pinelands Commission's regional plan, Robert Mason explores the changing politics of place and the associated conflicts of interest that have emerged. The Pinelands program is widely viewed as a land-use and regional planning experiment of national significance. While the commission is sustained by legislative and gubernatorial support and an absence of well-organized public opposition, it still has had to accommodate community and rural entrepreneurial interests. In order to convey some sense of the social, political, and economic texture of the Pinelands, Mason examines three communities--Woodland Township, Hamilton Township, and Manchester Township. The Pinelands experience offers a unique model for the management of valued places across the nation and provides valuable lessons about the human problems that confront ecologically-driven planning schemes with human settlement patterns, political subdivisions, and economic systems. Author note: Robert J. Mason is Assistant Professor of Geography and Urban Studies at Temple University.

Creating Successful Communities-Luther Propst 2012-07-11 Creating Successful Communities is a practical compendium of techniques for effective land use and growth management. It offers a framework for land-use decisionmaking and growth management: techniques for protecting key resources such as agricultural land, open space, historic and cultural structure,
aesthetics, and rivers and wetlands as well as ways to organize effectively. The companion Resource Guide provides detailed information on topics covered in I>Creating Successful Communities.

Law, Economics and Finance of the Real Estate Market-Rita Yi Man Li 2014-03-10 The symbiosis between the law, economics and finance is evidenced in our daily lives. This book elucidates the relationship between these factors in Singapore and Hong Kong in direct and indirect real estate market. In Singapore, for example, there is an inseparable relationship between law, economics, finance and the HDB market. The book also showcases the concept of invitation to treat and offer, monetary compensation for environmental externalities under the lens of institutional economics. It also sheds light on the relationship between financial crisis, regulations, housing prices and indirect real estate market.

Directions in Person-Environment Research and Practice (Routledge Revivals)-Jack Nasar 2016-06-10 First published in 1999, this book presents a fresh and diverse set of perspectives representing key directions of research and practice in the field of environmental design research. Leading researchers in various areas of person-environment research, such as privacy, children’s environment, post-occupancy evaluation, environmental cognition, environmental aesthetics, crime prevention, housing and environmental protection and environmental design present what they consider their best work. The book argues for the value of a multi-disciplinary and interdisciplinary approach to problem-solving and outlines many important directions for methods, research and practice.

The Politics of Place-Joseph P. Schwieterman 2006 Only in Chicago Can Zoning Be Epic... Chicago is renowned for its distinctive skyline, its bustling Loop business district, and its diverse neighborhoods. How the face of Chicago came to be is a story of enterprise, ingenuity, opportunity--and zoning. Until now,
however, there has not been a book that focuses on the important, often surprising, role of zoning in shaping the 'The City that Works.' "The Politics of Place: A History of Zoning in Chicago" reviews the interplay among development, planning, and zoning in the growth of the Gold Coast, the Central Area, and, more recently, massive 'Planned Developments': such as Marina City, Illinois Center, and Dearborn Park. It tells the story of bold visions compromised by political realities, battles between residents and developers, and occasional misfires from City Council and City Hall. What emerges is a fascinating, behind-the-scenes inspection of the evolving character of the city's landscape. Schwieterman and Caspall recount the many planning innovations that have originated in Chicago, the complexities and intrigue of its zoning debates, and the recent adoption of a new zoning ordinance that promises to affect the city's economy and image for years to come.
