Theoretical Nursing-Afaf Ibrahim Meleis 2011 "An additional assumption was that the processes for theory development were new to nursing and hence, nurses in graduate programs learned strategies for advancing knowledge from other disciplines. This assumption was debunked with the knowledge that nurses were always engaged in knowledge development, driven by their experiences in clinical practice. Because of these assumptions, most of the early writing about theory development was
about outlining strategies that should be used, rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories, therefore the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice, and others believing it should be driven by research"--

Self-Care Science, Nursing Theory and Evidence-Based Practice-Katherine Renpenning, MScN
This is an excellent review of the development of self-care deficit theory and the use of self-care in nursing practice. Explanations of the various theories and theory terms are well done and written at a level that novice theorists can relate to. The authors demonstrate how self-care science can be fiscally and effectively applied to the care of patients/clients."--Doody's Medical Reviews

Dorothea Orem's Self-Care Theory has been used as a foundation for nursing practice in healthcare institutions and as the basis of curricula in nursing schools for decades. This book explores the high-level theory of the application of Orem's Self-Care Theory, and how it can improve patient outcomes as well as cost-effectiveness of nursing care delivery. Written for nursing theorists, researchers, administrators, and graduate students, the text addresses the relationship of self-care theory and evidence-based care in nursing, and provides a solution to improving contemporary healthcare outcomes. The book is divided into three sections. Section one discusses the reason for the existence of the nursing profession, and identifies the performance of self-care. Section two covers three nursing practice sciences-wholly compensatory nursing, partly compensatory nursing, and supportive educative nursing. Section three offer suggestions on how health care organizations can incorporate this broadened perspective of what constitutes evidence based practice and ongoing research methodology into every-day delivery of nursing services. Key Features: Includes case examples to illustrate the application of theory to nursing practice Provides a current, cost-effective resource for implementing Orem's Self-Care Deficit Theory for effective evidence-based practice Builds the link between the application of Orem's Self Care Theory and improved patient and fiscal healthcare outcomes

A collection of over 50 articles published from 1975 through 2007 and five newly commissioned articles, Transitions Theory covers developmental, situational, health and illness, organizational, and therapeutic transitions. Each section includes an introduction written by Dr. Meleis in which she offers her historical and practical perspective on transitions. Many of the articles consider the transitional experiences of ethnically diverse patients, women, the elderly, and other minority populations. Key Topics Discussed: Situational transitions, including discharge and relocation transitions (hospital to home, stroke recovery) and immigration transitions (psychological adaptation and impact of migration on family health) Educational transitions, including professional transitions (from RN to BSN and student to professional) Health and illness transitions, including self-care post heart failure, living with chronic illness, living with early dementia, and accepting palliative care Organization transitions, including role transitions from
acute care to collaborative practice, and hospital to community practice Nursing therapeutics models of transition, including role supplementation models and debriefing models
