Theory and Practice in the Teaching of Composition-Miles Myers 1983 Intended to show teachers how their approaches to the teaching of writing reflect a particular area of research and to show researchers how the intuitions of teachers reflect research findings, the articles in this book are classified according to three approaches to writing: processing, distancing, and modeling. After an introductory essay that defines and explains the three approaches, the second part of the book contains eight articles that stress processing. These articles cover the psychology of thinking, mapping and composing, children's art, drawing as prewriting, prewriting as discovery, turning speech into writing, and the process approach and the elementary school writing curriculum. Part three, dealing with distancing, contains two articles defining "talk-write" as a behavioral pedagogy for composition and explaining its application in the classroom; and five articles on function categories, the composition course as the pursuit of ideas, a new curriculum in English, student writing response groups in the classroom, and the All-City High Project of the Oakland, California, school district. The articles on modeling in part four explain a generative rhetoric of the sentence, sentence modeling, "voices" in reading and writing, paraphrases of professionals in writing classes, the importance of reason in writing, and the superiority of showing over telling. The relationship between the teacher and the researcher is examined in the book's final essay. A bibliography is included. (JL)

Education Policy-Jerome G. Delaney 2017-12-18 What exactly is education policy, why is it important, and how is it implemented in the real world? Jerome Delaney, a professor of educational administration and former high school principal, answers the big questions about education policy in this powerful and practical primer for students. Informed by his experience in the public school system, Delaney takes a pragmatic and realistic approach that divides a complicated subject into manageable sub-topics. He grounds the debate at the classroom level: after all, that’s where the effects of high-level policy decisions ultimately play out. Starting from the basics and progressing through to the deeper aspects of education policy, this text provides an excellent introduction to a subject that lies at the foundation of every education system. This second edition includes a new chapter on issues relating to policy implementation, as well as new discussion questions at the end of each chapter. Topics include: A beginner’s overview of education policy studies. How values influence policy-making. How education policy is developed, implemented, and evaluated. The role of policy in education reform. The future of education policy as schools adapt to changing societies.
Social Work is facing fundamental changes and challenges. Neo-liberalism, globalization, corporate management and the mixed economy of welfare have transformed the profession by undermining former certainties of practice. ‘Clients’ have added their own voice to the need for new models of service delivery. Social Work engages with the dilemmas and opportunities emanating from the contested nature of practice. Using a broad range of theories, this book outlines the knowledge, skills and values that enable practitioners to respond more effectively to the demands of working in fluid and constantly changing contexts. Underpinning the approach that it takes is the idea that ‘clients’ are citizens with social and human rights which have to be respected. This provides the intellectual basis for a practice rooted in the ideas of citizenship, solidarity and reciprocity, thus reformulating the relationship between ‘clients’ and society. This important new textbook provides a comprehensive introduction to the dilemmas and tensions that practitioners are compelled to resolve in their daily work. It will be invaluable for students taking courses in social work, social welfare and applied sociology as well as nursing and health professionals, social work practitioners and policymakers.

Multiple Intelligences-Howard E. Gardner 2008-07-31 Howard Gardner's brilliant conception of individual competence has changed the face of education in the twenty-three years since the publication of his classic work, Frames of Mind. Since then thousands of educators, parents, and researchers have explored the practical implications and applications of Multiple Intelligences theory—the powerful notion that there are separate human capacities, ranging from musical intelligence to the intelligence involved in self-understanding. The first decade of research on MI theory and practice was reported in the 1993 edition of Multiple Intelligences. This new edition covers all developments since then and stands as the most thorough and up-to-date account of MI available anywhere. Completely revised throughout, it features new material on global applications and on MI in the workplace, an assessment of MI practice in the current conservative educational climate, new evidence about brain functioning, and much more.

Post Critical Museology-Andrew Dewdney 2013 "Post Critical Museology examines the current status of learning and knowledge practices in the art museum and investigates how to understand the challenges presented by the visual cultures of global migration and new media. The book locates the discussion of the future of the art museum in the realm of public participation and engagement with art and the museum. It provides a new analytical synthesis of the art museum through accounting for the agency of different communities of users and using theoretical approaches associated with science and technology studies. In the book's terms the art museum is continually made and remade through related networks and instead of an approach that starts with traditional hierarchies of cultural knowledge and value, it develops an analysis of the art museum in terms of an extended set of objects and performances and examines the points of relationship between them. In this way the book shows how the art museum in the first decade of the twenty-first century is no longer governed by the civic and civilizing mission of the nineteenth century, nor ruled by the logic of Modernist rationalism, but instead, can be seen as an institution seeking a new social role and identity and currently still struggling to understand and negotiate wider cultural signifying systems, government policy and market forces. Locating its critique in a constructive relationship to international progressive museological thinking and practice, the book calls for a new alignment in what it announces as post-critical museology. An alignment that is committed to rethinking what an art museum in the twenty-first century could be, as well as what knowledge and understanding its future practitioners might mobilize in a rapidly changing social and cultural context. The book aims to be essential reading in the growing field of museum studies. It will also be of professional interest to all those working in the cultural sphere, including museum professionals, policy makers and
art managers. "--

Reflective Interviewing-Kathryn Roulston 2010-01-21 Qualitative researchers have long made use of many different interview forms. Yet, for novice researchers, making the connections between "theory" and "method" is not always easy. This book provides a theoretically-informed guide for researchers learning how to interview in the social sciences. In order to undertake quality research using qualitative interviews, a researcher must be able to theorize the application of interviews to investigate research problems in social science research. As part of this process, researchers examine their subject positions in relation to participants, and examine their interview interactions systematically to inform research design. This book provides a practical approach to interviewing, helping researchers to learn about themselves as interviewers in ways that will inform the design, conduct, analysis and representation of interview data. The author takes the reader through the practicalities of designing and conducting an interview study, and relates various forms of interview to different underlying epistemological assumptions about how knowledge is produced. The book concludes with practical advice and perspectives from experienced researchers who use interviews as a method of data generation. This book is written for a multidisciplinary audience of students of qualitative research methods.
Economic Policy-Agnès Bénassy-Quéré 2010 Is the inflation objective of the European central bank set too low? Is European national debt excessive? Is a fixed or floating exchange rate better? Which taxes should be reformed? Can the European standard of living catch up with that of the United States? This book, a translation of a book published in French (de Boeck, 2004), brings precisely argued answers to these questions using rigorous economic analysis. The authors join together for the first time in one volume the fundamentals of the macroeconomic field with analysis of current debates in economic policy. They take the point of view of a policy maker who must intervene in one particular aspect of policy, and thus they put the reader at the cutting edge of the main issues, debates and challenges related to each policy aspect. Economic Policy explores in an open-ended way what various existing theories, macro and micro, have to say on these current policies, and points out the limits of each theory. Overall, it demonstrates to the reader how he or she can build upon the combination of existing theories and also on common sense in order to design adequate policy responses. The work will appeal to a large audience, including students in economics, management, and political science graduate schools, and professional economists and policy makers interested in issues in macroeconomics.
