Korydon Smith presents each common architectural subject – such as tectonics, use, and site – as though it were a conversation across history between theorists by providing you with the original text, a reflective text, and a philosophical text. He also introduces each chapter by highlighting key ideas and asking you a set of reflective questions so that you can hone your own theory, which is essential to both your success in the studio and your adaptability in the profession. These primary source texts, which are central to your understanding of the discipline, were written by such architects as Le Corbusier, Robert Venturi, and Adrian Forty. The appendices also have guides to aid your reading comprehension; to help you write descriptively, analytically, and disputationally; and to show you citation styles and how to do library-based research. Digital Decision Making-Ray Corrigan 2007-07-05 Since the mid 1990s, when the general public began using the Internet, governments and commerce have made vast investments in digital communications technology. There has been confusion and sometimes controversy over these, for example the proposed UK identity card system. The far-reaching commercial and social implications of decisions made in invisible or opaque specialist fields should concern every citizen. This book argues that decisions should be based on an understanding of the systems, technology and environment with which they operate; that experts and ordinary people should work together; and that technology and law are evolving in restricted rather than enabling ways.

Mentoring Across Boundaries-Jean Boreen 2003-01-01 Designed for mentors, administrators, and teacher educators, Mentoring Across Boundaries builds on the foundations of the authors’ previous book, Mentoring Beginning Teachers, to explore many of the specific issues that impact the mentoring relationship. While there are general mentoring strategies that apply to nearly all programs, the success of any individual mentoring situation is affected by the relationship between mentor and mentee, the school environment, the mentee’s stage of career, and other influences. Among the issues the authors explore are: age, gender, and culture in the mentoring relationship; new teachers in urban or rural school environments; veteran teachers moving across buildings or into a new school; teachers working with at-risk students; mentoring “burned-out” teachers; self-mentoring; working with struggling teachers; mentoring through technology. The most recent report from the National Commission on Teacher and America’s Future states that “The conventional wisdom is that we can’t find enough good teachers. The truth is that we can’t keep enough good teachers.” Mentoring has proven one of the most effective ways to keep teachers in the field. With Mentoring Across Boundaries in hand, mentors and administrators will find the guidance they need to navigate many of the rough spots that have the potential to derail successful mentoring.

It focuses on explanatory texts concerning subjects typically dealt with in secondary or higher education and addressed in an academic or popular context. It highlights the general difficulties and obstacles inherent in teaching physics and shows how some tools can help to combine successful criticism and better understanding. The book examines the main reasons to call a text into question and looks at risk factors such as simplifications, story-like explanations and visual analogies. It takes inventory of the benefits and limits of critical analysis and discusses the complexities between conceptual mastery and critical attitude. The book ends by offering tools to activate critical thinking and ways for educators to guide students towards productive critical analysis.

Andragogical Instruction for Effective Police Training-Robert F. Vodde 2009 This book details a 2-year study that examined and compared the efficacy of an andragogical instructional methodology to that of a traditional, prescriptive, pedagogical, and militaristic form of basic police training. The study not only revealed that an andragogical approach yielded greater outcomes in terms of skills and competencies, but was preferred among recruits, in great part due to the emphasis placed on experiential learning and a collegiate and collaborative approach to learning. In his research, Robert F. Vodde identified six thematic, categorical constructs by which basic police training programs can be organized and administered, to include the importance for not only working within a quasi-military hierarchical organizational structure, but in preparing recruits for the emotional and physical challenges associated with police work. When properly administered, an andragogical approach represents a well-planned and skillfully orchestrated process that holistically integrates all aspects of the curriculum; one that capitalizes on the use of multi-sensory, experiential, hands-on learning activities that allow recruits to apply what they have learned. Considering the short and long-term impacts of basic police training, Vodde illustrates throughout this book that "an andragogical approach to training" is one that creates a physical and psychological climate that takes into consideration the affective needs of the recruit, thus providing for a healthy, engaging, challenging, and collaborative atmosphere in which future police officers "develop a clear understanding and perspective of their role within the greater context of society."

Lombard 2012-05-31 In 1826 Josiah Holbrook created a program of adult education he called the Lyceum. It spread rapidly and in its most active years from 1830 to the 1860s it was an important factor in public education. It was needed then because the population wasn’t being provided adequate educational opportunity. Today, in at least one in respect for one critically important segment of society, history is unfortunately being repeated. The education of my grandchildren and everyone else’s children and grandchildren is at risk because of a combination of a variety of causes. Those causes include, but are not limited to, attacks upon the tenure system, shrinking school budgets, soaring class sizes, and the proliferation of standardized testing. All of these factors combined have produced a situation in which children will not be instructed on how to think for themselves. This lyceum done in print is an attempt to mitigate the damage from that lost opportunity. This work is titled the Lombard Lyceum because it is written for and directed toward the education of my grandchildren: Douglas, Alex, and Emma. My hope is that through this format I can have an influence on how and how well they are educated. If this volume proves to be of value to others that would be gratifying.
